

AI Cohort Session Transcript

 Topics: Second Brain Systems, High-Frequency Trading, LangChain/LangGraph, Cloudflare & Personal Knowledge Architectures ✨

 Rifat

 Bora

 Sude

 Marianna

 Rifat  00:02:52:25 - 00:02:55:25

Hello, how are you today?

 Bora  00:02:57:03 - 00:02:59:08

All right. How are you doing?

 Rifat  00:02:59:08 - 00:03:19:14

I'm doing fine. I'm doing fine. We are waiting for others to join. So we are going to do this in mostly in English, but this is like a party. This is not like a lecture. If you have something like a lecture in mind, I'm trying to pivot this into as much party as we can. How are you?

 Bora  00:03:21:22 - 00:03:24:12

I'm in all day.

 Rifat  00:03:24:12 - 00:03:27:05

Are you in Turkey or are you in the UK?

 Bora  00:03:29:15 - 00:03:31:11

I'm in Antalya actually.

 Rifat  00:03:31:11 - 00:03:34:14

You are in Antalya, right? You are in the nice weather.

 Rifat  00:03:35:24 - 00:03:39:23

How hot is it right now though?

 Bora  00:03:41:28 - 00:03:56:21

Well, right now I would say there should be something like... Oh, it's 36 degrees. Yeah, air condition is on, so no problem.

 Rifat  00:03:56:21 - 00:04:05:23

I got a fan off. In the UK, as you know, there are not that many ACs in the houses flat.

 Rifat  00:04:06:24 - 00:04:10:20

But it is not as hot as it is like this most of the time.

 **Rifat** ⌚ 00:04:11:24 - 00:04:19:26

By the way, I did enjoy your comments. You are still working. What are you doing right now? You are working on the automatic trading right now, right?

 **Bora** ⌚ 00:04:22:24 - 00:04:33:00

Yeah, I'm trying to do vibe coding on mods and trying to find the right strategy for the...

 **Bora** ⌚ 00:04:35:09 - 00:04:37:24

especially on the production market,

 **Bora** ⌚ 00:04:39:02 - 00:04:45:02

like Polymarket or something like Kalsy and Polymarket basically.

 **Rifat** ⌚ 00:04:46:24 - 00:05:33:13

Alright, that's interesting because I was talking to a friend of mine. Maybe I mentioned to him his name is Errol. He's also looking into these stuff. But I think this motivation is so important because he was talking about robots intelligence for the last 20 years, building these bots to buy and sell. Right now there is AI and he lost his motivation. It's very interesting. He was talking about this for so long. But right now what I feel is he just lost motivation on it. I think for you to be able to stay motivated is critical in this because I was doing the eToro during the Covid period. I realized it is not for me though.

 **Rifat** ⌚ 00:05:34:15 - 00:06:00:00

My emotions were like this and this in the same day doing day trading. So I realized this is not for me though. And I was also doing contracting. Such as if I lost a day of contracting, it had X number of pounds for me. And so what I said is instead of losing that many, I will focus on doing the work. Hello Sudhe, how are you?

 **Sude** ⌚ 00:06:00:00 - 00:06:03:00

Hello, I'm good. How are you?

 **Rifat** ⌚ 00:06:03:00 - 00:06:10:05

Good, very good. Sudhe, Bora, Bora Sudhe. Nice to meet you. We are recording these calls.

 **Rifat** ⌚ 00:06:11:08 - 00:06:27:21

Everybody speaks in Turkish, but we recorded in English. Yes, because what we are doing is we are recording these calls, uploading them and we expect people to be able to watch them. So this is the reason we are doing them in this format.

 **Rifat** ⌚ 00:06:28:29 - 00:07:05:27

As I realized for the last eight times, we are doing this a bit like a lecture. I also watched the footages and I'm learning about the school, this platform. I'm trying to convert them into kind of a party like a structure, not somebody trying to first teach, but go over about a couple of subjects about self-learning, about using the AI. I turned this into a meeting, not just a lecture like you are getting questioned about it. But we were talking with Bora before we arrived.

 **Rifat** ⌚ 00:07:07:09 - 00:07:39:21

I was working on eToro. eToro is an ETF platform, electronic trading platform, and it has ETF assets. What ETF is, eToro goes and buys Turkish lira and the American dollar, so you can open it for exposition. Or they go ahead and buy a Tesla. You will be able to buy a Tesla position. They are operating in the UK as well as in Cyprus.

 **Rifat** ⌚ 00:07:40:29 - 00:07:44:23

And the money for £75,000, they were guaranteed in the UK.

 **Rifat** ⌚ 00:07:45:24 - 00:08:09:23

So I said it will be a good time for me to try it out. Then I realized I was over my head because you have to be in the markets for a long time to learn about the markets, to learn about the money. And you need a very good nervous system. I realized my nervous system was not good enough to be able to handle it.

 **Sude** ⌚ 00:08:10:24 - 00:08:11:29

Estafrula.

 **Rifat** ⌚ 00:08:11:29 - 00:08:26:21

Yes, that is the case. Bora, how many positions are you opening? Are you a long trader, a short trader? Are you opening daily positions? Are you a swing trader? What kind of trades do you do right now?

 **Bora** ⌚ 00:08:28:24 - 00:08:31:09

Well, I haven't been doing shopping actually.

 **Bora** ⌚ 00:08:32:12 - 00:08:32:23

All right.

 **Bora** ⌚ 00:08:33:24 - 00:08:35:15

Day trading,

 **Bora** ⌚ 00:08:36:18 - 00:08:38:21

mostly short positions. But

 **Bora** ⌚ 00:08:40:13 - 00:08:42:22

manual trading is that stuff.

 **Bora** ⌚ 00:08:44:20 - 00:08:53:08

You win 20 times and then you lose one time and then all the money goes.

 **Bora** ⌚ 00:08:54:09 - 00:09:15:29

So I just quit and then I tried to do live coding, AI and do some bots. And bots would do the better job maybe. I'm just trying to find out what the strategy could be. Do the better jobs.

 **Rifat** ⌚ 00:09:15:29 - 00:09:48:25

Sculping is like you are going to have your heart in your hand all the time. What scalping means is, so therefore me, what scalping means is you are expecting the market to go up and down in an interval. And you are going to get the fish at that time. And you expect the market to move up while the fish is flying in the air. You are going to be able to close the position. If you can't close the position, you might have a hard time with that position.

 **Sude** ⌚ 00:09:48:25 - 00:09:50:25

So it's up to luck.

 **Rifat** ⌚ 00:09:52:08 - 00:10:01:12

You can do, I guess, data science, such as on Mondays people have similar positions. Hello, Maria, how are you?

 **Sude** ⌚ 00:10:01:12 - 00:10:02:04

Hello.

 **Rifat** ⌚ 00:10:04:01 - 00:10:11:08

Before you arrived here, three people speaking in Turkish because you were recording and I knew that you were going to join.

 **Sude** ⌚ 00:10:12:08 - 00:10:14:23

Your microphone is closed.

 **Rifat** ⌚ 00:10:14:23 - 00:10:37:08

Yes, there's a mic issue. No, you will sort that. I think this school is the first time we are trying school Bora. We were always trying the Google Meets. So that was the case. But this has a very, very similar feature. So, scalping Sude, what Bora is doing can be data mined and understood.

 **Rifat** ⌚ 00:10:38:08 - 00:11:14:16

There is a couple of hedge funds who are doing this in a big scale. They understand how the markets move. So you might be able to understand that people do on Thursdays, on Fridays, on Mondays. There are these big events. Or if there's a COVID virus, there is some event that's going to happen that you might be able to predict better than other people. Such as if there's a war in Iran, in Ukraine, rate of stocks might go up or the oil stocks might go down. You might be able to predict if you are working on this.

 **Sude** ⌚ 00:11:14:16 - 00:11:15:23

Like Google Trends.

 **Rifat** ⌚ 00:11:17:00 - 00:11:48:08

Like similar to Google Trends, but scalping and day trading happens in a day or in a minute, in 10 seconds or even sometimes in milliseconds. So you have to have a strategy and money invested in it, for my understanding. So I felt lots of stress. I had a hard attack at the age of 28. So I said I don't want one more. It's hard, yeah. No, that was my experience.

 **Rifat** ⌚ 00:11:50:08 - 00:11:51:22

That was my experience.

 **Rifat** ⌚ 00:11:53:08 - 00:11:53:17

Yes.

 **Rifat** ⌚ 00:11:55:08 - 00:11:56:21

So Mariana can be here.

 **Marianna** ⌚ 00:11:57:29 - 00:11:58:25

I think yes.

 **Rifat** ⌚ 00:11:58:25 - 00:12:05:06

Yes, now yes. We can definitely see you. Hello. How are you Mariana?

 **Marianna** ⌚ 00:12:06:08 - 00:12:17:16

Good, thank you. But it's not so hard because I'm not ready to live in Africa and it happens in the UK. It's difficult.

 **Rifat** ⌚ 00:12:19:08 - 00:12:29:22

Before you arrived, you were talking about Boraborra is right now in the hottest place. I guess he's in Antalya. I can't imagine.

 **Rifat** ⌚ 00:12:30:26 - 00:12:39:11

Ukrainians love Antalya. I have seen so many Ukrainians in Antalya. That's one of the hotspots that people go through.

 **Marianna** ⌚ 00:12:39:11 - 00:12:40:10

Very hard, yes.

 **Rifat** ⌚ 00:12:42:19 - 00:12:45:24

So he's with AC. I have the fans.

 **Bora** ⌚ 00:12:45:24 - 00:12:46:25

Yeah, AC.

 **Rifat** ⌚ 00:12:46:25 - 00:12:51:06

In Sudan, Ireland, do you guys have the fans or the AC?

 **Sude** ⌚ 00:12:52:06 - 00:12:52:13

No,

 **Sude** ⌚ 00:12:54:05 - 00:12:54:28

I don't know.

 **Rifat** ⌚ 00:12:56:07 - 00:14:30:05

Most of the time Ireland, the UK, there's not that much. So what we did was I will just share my screen and just go over just a simple presentation. We are trying to move this format from a lecture to a party to make sure that I'm not trying to lecture people. We are trying to have a good time about what we are doing here. So feel free that if this starts to become lecture, just raise the flag and say, make sure that we go in and out of the sessions. We talk about the topics about learning, self-learning with AI. I did come up with the base topics. There could be more topics coming in and out. But this is just a guideline for us. I think the second brain, which is the supervised inputs and the unsupervised discovery part right now, it doesn't have to go within the order, though. But this is just giving an idea about what we are going to talk about, what we are doing. We have all the different backgrounds that we are doing. And the last thing is we are open and ready to listen because everybody has different backgrounds. But Bora has a different background. Mariana has a different background. And I have a different background. We always come from different backgrounds and we should be ready to listen. Otherwise, if it is only me talking, I've been into so many lectures during the week. It is not fair for you guys as well on a Sunday night.

 **Rifat** ⌚ 00:14:31:09 - 00:15:12:07

In the background, what we want to be able to get is we get together and we study for the AI certification exams for a for cloth certification. We will have the other certifications as well. But right now the cloth is on the horizon that we are studying for it. I was able to pass it to the and Maria is working on it. If you are also interested on becoming a cloth professional and architect or an associate, we created these roadmaps. You can also follow them as well. But what Bora was saying, he was doing scalping and he was doing the trading. How was your week, Mariana?

 **Marianna** ⌚ 00:15:14:18 - 00:15:25:11

It's okay. Thank you. I wasn't very productive if we are talking about AI. I didn't do things with brain, AI brain.

 **Marianna** ⌚ 00:15:27:08 - 00:15:29:13

I'm going to start with tomorrow.

 **Rifat** ⌚ 00:15:29:13 - 00:15:30:12

All right.

 **Rifat** ⌚ 00:15:32:01 - 00:15:33:21

I guess it is for me.

 **Rifat** ⌚ 00:15:35:02 - 00:16:19:20

I put it into core of my work and my personal life. I put my I do my food recipes. I shared it with Bora. I do that. And every day I go to work. I'm also using that to be able to do my work. The reason I use both of them is in our normal minds. There's not a difference in myself, like your personal life and your work life is happening at the same time. Apple has a TV series about it. Did you guys watch the TV series called Severance? No. I heard about it. I will show the TV series. You guys can also test how to share your screens as well. So can you guys see my screen?

 **Sude** ⌚ 00:16:19:20 - 00:16:20:24

Yes.

 **Rifat** ⌚ 00:16:20:24 - 00:17:07:29

So this is the Severance. Severance is written like this. It is a 2022 Apple TV series. They are spending lots of money on it. So what this is is they are separating humans' minds and their work life and personal life get separated. And it is good. The 8.6 is a very good score on IMDB. So what they are doing in the TV series is you are supposed to separate when you go to work or you forget about your personal life. Once you go back to your personal life, you forget completely about your business life. So they put some... Good. It's very good.

 **Sude** ⌚ 00:17:07:29 - 00:17:08:27

Awesome. Yeah.

 **Rifat** ⌚ 00:17:10:24 - 00:17:49:19

But it is not the reality, though, such as Boro is most of the time because he is doing this sculpting, which is a high risk stuff, or people in Ukraine. I don't think they are able to separate their personal life and the business life because it is right now having hard times. As well as in Sude, he is coming from the Turkish culture. The gundan, the highlights, everybody is mindless. So I don't think they can be separated. But the premise of the TV series is we are separating them out. Did you have time to watch it, Boro, the second brain?

 **Bora** ⌚ 00:17:52:06 - 00:17:54:23

Yes. Yeah, I watched it. Yeah.

 **Rifat** ⌚ 00:17:54:23 - 00:18:05:09

Do you do anything related to it for your own work or for your personal life? Do you have some kind of a personal knowledge management system that you are running on?

 **Bora** ⌚ 00:18:07:20 - 00:18:11:28

Well, actually, I have been using Obsidian for a while because

 **Bora** ⌚ 00:18:13:20 - 00:18:20:13

I'm just synchronizing the project repos between the

 **Bora** ⌚ 00:18:22:01 - 00:18:24:07

projects I am using on it

 **Bora** ⌚ 00:18:25:08 - 00:18:27:09

via the Obsidian.

 **Bora** ⌚ 00:18:28:26 - 00:18:30:00

There is a shared

 **Bora** ⌚ 00:18:31:02 - 00:18:40:29

vault on GitHub. And then all the information coming from the two different repos.

 **Bora** ⌚ 00:18:42:26 - 00:18:44:00

I'm using two

 **Bora** ⌚ 00:18:46:10 - 00:18:53:16

tools, Claude and chat GPT. And so I'm switching over when the

 **Bora** ⌚ 00:18:55:03 - 00:19:02:09

weekly limit or daily limit hits and then I'm switching over the other one. So the

 **Bora** ⌚ 00:19:03:11 - 00:19:04:00

project

 **Bora** ⌚ 00:19:05:13 - 00:19:14:27

switched over from one to the other one. So I have been using Obsidian for a while, but not for personal use, actually.

 **Rifat** ⌚ 00:19:14:27 - 00:19:21:09

You are not using the second brain, you just want to use it in business. All right.

 **Rifat** ⌚ 00:19:22:24 - 00:19:29:26

So how long ago did you get introduced to Obsidian? Why did you start using it? Why was it important for you to use it?

 **Bora** ⌚ 00:19:33:14 - 00:19:55:26

Well, actually, I had to use it because I hit the limit very fast and then I had to switch the model quite a bit, like every three days or something like that.

 **Rifat** ⌚ 00:19:56:27 - 00:19:59:03

Are you paying for a Gemini?

 **Rifat** ⌚ 00:20:01:15 - 00:20:03:17

What are you paying for right now?

 **Bora** ⌚ 00:20:05:03 - 00:20:09:21

I'm paying for chat GPT and Claude subscription.

 **Rifat** ⌚ 00:20:10:23 - 00:20:22:29

All right. So you are hitting the five hour limit and you are hitting the weekly limit on Claude. How is the limiting system on the Codex, on the OpenAI part?

 **Bora** ⌚ 00:20:29:15 - 00:20:32:00

Actually, I'm using the Hermes

 **Bora** ⌚ 00:20:33:11 - 00:20:42:02

agent. Hermes is using the chat GPT, GPT 5.6V.

 **Bora** ⌚ 00:20:43:09 - 00:20:43:17

But

 **Bora** ⌚ 00:20:45:16 - 00:20:52:23

I'm not happy with that. So recently I had to switch it to the Claude.

 **Bora** ⌚ 00:20:54:02 - 00:21:02:09

Now my project is on the Claude. I'm working on the Opus 5 model.

 **Rifat** ⌚ 00:21:02:09 - 00:21:16:20

All right. So, yeah. How many six months ago, people using Hermes, using the Claude subscriptions, Claude was trying to ban those kinds of usages. Did you get affected by those or you didn't get affected?

 **Bora** ⌚ 00:21:19:14 - 00:21:22:17

Yeah, it affected me because I had to

 **Bora** ⌚ 00:21:24:25 - 00:21:28:26

let it go because I'm not paying for the API

 **Bora** ⌚ 00:21:30:22 - 00:21:48:27

usage. So I'm just subscribed to it. So I cannot use it with the Hermes agent. So I just need to use chat GPT with the Hermes. And separately I'm using Claude.

 **Rifat** ⌚ 00:21:48:27 - 00:21:54:23

We met with Borah in London, close to Richmond.

 **Rifat** ⌚ 00:21:56:00 - 00:22:10:20

I also mentioned the same thing to him as well. People use the API points. He knows if he uses the API points, his bill could come up to thousands of dollars very, very easily because he's running these data models.

 **Rifat** ⌚ 00:22:11:20 - 00:22:37:10

And it is always a gamble. If you use it, you might be able to win in the markets, but lose the money to chat GPT. So it is a double-edged squirt. So you have time to make a good decision. And Hermes is an agent, is an orchestrator agent that can use these tools and it's going to help more code environments, notifications,

 **Rifat** ⌚ 00:22:38:26 - 00:22:50:25

background running tasks. Much easier than writing it as a normal resource. So that's always a decision. Sorry, Mariana.

 **Marianna** ⌚ 00:22:51:29 - 00:22:55:11

I mean, I don't know that system.

 **Rifat** ⌚ 00:22:56:11 - 00:23:45:19

I did write it on the chat. I will put the link as well to Hermes. Hermes is a more agent tool, but if Borah can also put it, but I will put it because I have it ready. Hermes agent, it's a very good agent, such as I have a storage unit, Borah. I have one 52 ports with, so I can attach 52 agents and run a big cluster on it. I was thinking about doing it. Then I gave up because I had like four or five machines here and I'm only using one and eight and on here. So you are running these always in the background. Is that correct or are you running them when the market opens up?

 **Bora** ⌚ 00:23:45:19 - 00:23:52:20

No, it runs 24 hours on my iMac back in the UK.

 **Bora** ⌚ 00:23:53:20 - 00:23:59:20

So I can talk to agents whenever I want through the telegram.

 **Rifat** ⌚ 00:24:00:21 - 00:24:20:11

So for scalping, such as once I was doing eToro because it was ETFs, it didn't use the MetaTrader. It was not fast. So I was unable to do scalps. Are you connected to platforms like MetaTrader where you can do fast transactions or you are not doing fast transactions?

 **Bora** ⌚ 00:24:23:21 - 00:24:30:11

Well, the agent can go to any exchange like I'm using Vybit, for example.

 **Bora** ⌚ 00:24:31:15 - 00:24:44:12

They can put any position on behalf of me. So I don't need a middleman actually.

 **Rifat** ⌚ 00:24:45:20 - 00:25:13:20

All right, but is the Vybit. I'm looking at the Vybit in the background, but probably I'm writing it wrong. The Vybit is a platform that lets you open positions and you have some kind of a deposit there. And you are doing margin calls for the Mariani. If you guys never have done it, you can open up market positions like a financial trader and make money on it on a daily basis on a month.

 **Rifat** ⌚ 00:25:14:20 - 00:25:33:21

Or on a yearly basis. So what the Hermes agent, as far as I understand, what it does is, Bora has some kind of rules. A rule engine that he created, that engine makes decisions for you. Or do you make the decisions yourself, Bora, as a human in the loop?

 **Bora** ⌚ 00:25:36:09 - 00:25:38:20

Actually, AI does that.

 **Bora** ⌚ 00:25:39:20 - 00:25:50:23

I'm trying to find the right strategy. Once the strategy is set up, then AI does all the positions itself.

 **Rifat** ⌚ 00:25:51:26 - 00:27:07:03

All right, so I want to try it. If you guys want to try it, I can show my positions. If you guys have never seen this, I can show my old positions that I opened up against the Turkish market. Because the Turkish loves these speculative markets. This is my e-tory account. As you guys can see that I didn't use it for some time. These are mostly in the COVID times. If I open it, there is some portfolio ups and downs. Can you guys see it? I had like 33% yearly. This is not bad. 48% yearly. 4.67% on 2020. Positions that I made money or I lost money. You can just go in and see which positions that I opened up in the markets. This is an online platform which lets you open up the positions. Such as what you can do. It is you can come here and be able to buy gold on here. Gold is a commodity and you will be able to buy gold on here. Or you want to be able to buy wheat. I was going to buy wheat for Ukraine market.

 **Rifat** ⌚ 00:27:08:13 - 00:27:21:17

Because the wheat price. Ukraine is a wheat depot. Once there is war happening, the wheat price does go up and down. Because Ukraine gets blocked. The wheat price goes down. The hormones get blocked.

 **Rifat** ⌚ 00:27:22:17 - 00:27:23:09

The oil price.

 **Rifat** ⌚ 00:27:24:20 - 00:27:56:29

So you can make those kinds of decisions. But the reality is, what Boris Zink, I guess, he is not always looking at the screens. He writes his own rules. So the system goes and buys it. But in my case, I was looking at my phone way so much. Because you can always make money and lose money every single day. I became addicted. Right now, I even deleted the YouTube from my phone. So, are you checking your accounts daily, Boris?

 **Bora** ⌚ 00:28:00:01 - 00:28:24:07

Well, I used to do that. But I just quit doing that. Because I was doing paper trading with the virtual money. And I was checking out my dashboard and the graphic was going down. So I just quit the crypto market. Actually, now I'm on the prediction market.

 **Bora** ⌚ 00:28:26:16 - 00:28:30:04

Do you know about the prediction market? Like about the biased territory?

 **Bora** ⌚ 00:28:32:00 - 00:28:32:10

Yeah, yeah.

 **Bora** ⌚ 00:28:34:25 - 00:28:37:00

It's totally different concept.

 **Bora** ⌚ 00:28:38:02 - 00:28:41:02

It's totally different concept from the crypto market.

 **Bora** ⌚ 00:28:42:12 - 00:29:02:29

There is only one "yes" or "no". If you predict, if it's "yes", you get all the money, whatever you pay for it. And if it's "no", and then you say "yes", you lose everything. So, there is one or zero.

Rifat ⌚ 00:29:02:29 - 00:29:12:01

Yes, such a change. You can say, "We'll put in the end of 2026". That is in the poly market. Or,

Rifat ⌚ 00:29:13:01 - 00:30:07:01

"Will there be a new shopping mall in Cambridge that is going to get built?" It is also in the poly market. You can bet on anything you want on the poly market. It's a different kind of mentality. But the good thing is, it is generating so much data. All these second brains, all these data science platforms can collect them and make predictions on them. And some people will make money out of them. I know that I am a fish in that market, so I'm not going into those markets. I did it during the COVID. But right now, I think, even though I write an agent, how do you evolve your agent for? Are you evolving your agent? How are you making the decision to change from one market to the other market? Such as, why did you stop the crypto market and went to the poly market? Or, how do you make those decisions?

Bora ⌚ 00:30:10:11 - 00:30:10:26

I mean, the

Bora ⌚ 00:30:11:29 - 00:30:14:00

crypto market is so volatile.

Bora ⌚ 00:30:15:15 - 00:30:21:12

You never know if one news comes up and then you lose everything

Bora ⌚ 00:30:22:20 - 00:30:24:14

in a day. So

Bora ⌚ 00:30:25:21 - 00:30:29:02

now, I'm trying to find a strategy that

Bora ⌚ 00:30:32:11 - 00:30:48:01

predicts very well. The strategy is something very technical. And it's involved in high-frequency trading. It's called HFT.

Bora ⌚ 00:30:49:14 - 00:31:15:10

And only the bots can do it because you cannot manually do it. You have to do it on the screen 24 hours. You cannot do that. Only bots can do it. So that's why I'm trying to find out how those bots can find the right strategy to

Bora ⌚ 00:31:17:03 - 00:31:24:21

bet very fast. It's high-frequency. So that's my aim right now.

Bora ⌚ 00:31:26:05 - 00:31:30:17

I'm not interested in the crypto market anymore.

Sude ⌚ 00:31:31:17 - 00:32:01:25

What about the outdoor interventions? Because as I know, in this area, there are too many interventions that are coming from the outdoor companies. Like if they are saying that, okay, we are reducing these bets or we are reducing this table, every graph can be decreased easily. So how

 **Sude** ⌚ 00:32:03:00 - 00:32:04:10

can you deal with it?

 **Bora** ⌚ 00:32:08:00 - 00:32:12:24

I mean, my strategy is kind of different. I have to explain right now. But

 **Bora** ⌚ 00:32:14:25 - 00:32:24:19

the information coming from the sources, the sources are the meteorological stations. They

 **Bora** ⌚ 00:32:27:29 - 00:32:32:25

are picking up the degrees from the stations. And

 **Bora** ⌚ 00:32:33:28 - 00:32:38:25

by the time they get information from the station,

 **Bora** ⌚ 00:32:40:19 - 00:32:42:10

people are just betting on it.

 **Bora** ⌚ 00:32:43:10 - 00:32:48:18

But on the exchange site,

 **Bora** ⌚ 00:32:50:02 - 00:33:01:09

this information replaced or refreshed like 100 milliseconds later.

 **Bora** ⌚ 00:33:02:12 - 00:33:04:15

So if you bet earlier,

 **Bora** ⌚ 00:33:06:00 - 00:33:06:17

you get the

 **Bora** ⌚ 00:33:08:26 - 00:33:09:17

right

 **Bora** ⌚ 00:33:10:23 - 00:33:22:23

degree from the station before it refreshes on the exchange site. You know what's going to be, right? So you have

 **Bora** ⌚ 00:33:25:05 - 00:33:28:06

more possibility to win. That's my

 **Bora** ⌚ 00:33:29:08 - 00:33:39:22

win. So I'm trying to get that information very quickly from the station and I bet before it refreshes on the exchange.

 **Bora** ⌚ 00:33:41:01 - 00:33:47:24

That's my strategy. But you have to be very close to the servers.

 **Bora** ⌚ 00:33:49:00 - 00:33:51:05

And the best place is the island,

 **Bora** ⌚ 00:33:52:18 - 00:33:58:10

because it's the closest place to servers. So my VPS is on the island.

 **Bora** ⌚ 00:34:00:00 - 00:34:06:26

And I'm running my bots from the island VPS.

 **Rifat** ⌚ 00:34:08:27 - 00:34:47:28

Probably next to you, Sudhe. Sudhe is in the island right now. So Sudhe, if you are going to work for a company, you can build up a betting system maybe for yourself. What your future career is going to be. That is also a bet. Once the war with Ukraine and Russia is going to end, that's also another bet. I'm trying to do a bet using AI on this cohort, on this AI certification system. I created also something very similar to what Bora is doing. From time to time, I'm sending those numbers to Mariana.

 **Rifat** ⌚ 00:34:48:29 - 00:34:54:18

Two weeks ago, we met in the hotel next to the train station.

 **Rifat** ⌚ 00:34:55:20 - 00:35:19:00

And I gave Mariana's business to the AI. And I asked AI to bet on that business. And what the AI said is for my business, only 35 out of 100, that it can be successful. On Mariana's business, it said, "Mariana, you are not doing only one business, but you are trying to do seven businesses a day." Seven businesses at the same time.

 **Rifat** ⌚ 00:35:20:17 - 00:35:56:18

What AI can do, can leverage, is to be able to show these numbers easier because everybody has one thing that is limited. Maybe you are the youngest in a Sudhe. For me, I'm losing into time. I see Mariana going to the gym and I also started to go swimming there. I'm like, "Oh, I'm getting cold. I need to open up more positions." It doesn't have to be the market positions. The position that I'm opening up is on AI learning systems. But I'm trying to support it with a second breath.

 **Rifat** ⌚ 00:35:57:22 - 00:36:40:09

What I'm trying to do is, Bora also is using the Obsidian to be able to predict. But you can also use the Obsidian to be able to predict your future or Mariana's business future as well. So it doesn't have to be on me that one. I can show you guys if you guys are interested on how I did the test with Mariana. Every day, I'm running on the business and I'm asking the AI, "How are my chances to win or to lose?" I started with 35. I moved to 41 last week, two weeks ago. Then I got stuck.

 **Rifat** ⌚ 00:36:41:15 - 00:37:31:28

Once I got stuck, I understood I needed to do something different. Then I moved to this platform, Skook, because Bora, we were doing this on WhatsApp and using Google Meet. Then we moved to Skook because I asked the AI what I need to do. As a second brain, I'm collecting all the notes and the data. The AI is giving me a maturity score and saying, "If this business is going to succeed, Rifat, you need to make sure you take these steps." So what it asks is, such as Bora said, something very important. You have to be very close to the server in the real world. He can make the right predictions, but he's far away from the server that he cannot make the win. So there are lots of things that affect and AI can amplify or show this.

 **Rifat** ⌚ 00:37:32:29 - 00:37:44:26

For Mariana, do you think you will be able to use the second brain and set up your system like this? What do you think? You said you didn't have the time though this week, right?

 **Marianna** ⌚ 00:37:44:26 - 00:38:01:18

I'm going to create a folder with all available data and to make access to Obsidian. I like to do it to connect to Obsidian and then to proceed this data in Claude.

 **Rifat** ⌚ 00:38:02:23 - 00:38:14:10

What kind of data are you going to collect? Such as I'm holding all the data, Bora is putting on the business data, so you are using educational data, right? Yes.

 **Marianna** ⌚ 00:38:14:10 - 00:38:16:13

It will be science,

 **Marianna** ⌚ 00:38:18:04 - 00:38:19:23

public information.

 **Marianna** ⌚ 00:38:21:09 - 00:39:03:18

Honestly, I'm working on the subject Longevity. The Chinese people, they are entering the UK market with a Longevity subject and they want to... They created sort of ecosystem in China already, but if they want really to succeed on the UK market, it is to develop a nice ecosystem because they want to go in different directions. I'm going to do tomorrow brainstorming using available materials that I've got from them.

 **Rifat** ⌚ 00:39:03:18 - 00:39:38:02

So as I understand, everybody is becoming some kind of a data scientist, including on the education. Mariana on her side, Bora, I'm doing on the generic side, everybody is doing some kind of data science on it. So I created a dashboard for my second brain and I'm using the Obsidian. Bora, did you created any web user interface or you are only using harness to see what you have in the second brain?

 **Bora** ⌚ 00:39:40:14 - 00:39:48:00

Yeah, I'm just using that for the harness. I don't use any web server.

 **Rifat** ⌚ 00:39:48:00 - 00:39:52:28

Mobile phone or with harness, you are sending a telegram message to yourself.

 **Bora** ⌚ 00:39:55:07 - 00:39:59:11

Yeah, I'm using telegram to send a message to a Hermes agent.

 **Rifat** ⌚ 00:39:59:11 - 00:40:45:20

That you can do as well, Mariana. If you don't want to set up any system like a dashboard kind of stuff, such as through the did, she shared all the web pages with Hermes, what you can do is instead of setting up all these UIs, you are already using WhatsApp, you are already using telegram, you set up your Hermes or use a hosted Hermes service to be able to do the second brain result. You don't always have to do all those setups, but how much do you pay for it, Bora? You are paying the electricity, I guess, on your Mac mini and you are always keeping it on and you are also paying the internet. So you are at least paying 50, 60 pounds, right?

 **Bora** ⌚ 00:40:48:16 - 00:40:52:15

Yeah, because I am also paying for the VPS in Ireland.

 **Rifat** ⌚ 00:40:52:15 - 00:40:57:26

All right, the VPS minimum amount. How much is the extra?

 **Bora** ⌚ 00:40:59:07 - 00:41:05:22

It's \$55,000 a month.

 **Rifat** ⌚ 00:41:05:22 - 00:41:15:07

Why \$57 a month? Are you using like four cores and a very high speed trading system? Is that the reason?

 **Bora** ⌚ 00:41:15:07 - 00:41:35:00

One Linux back and also Windows Server too, because I need a Polymarket UI and I can run it only on the Windows Server, so I need Windows Server and also bots are running on the Linux Macs, so I need the Linux Server as well.

 **Rifat** ⌚ 00:41:35:00 - 00:41:55:16

So you can do this in Ireland, set up your room, couple of Macs and sell it to \$55. Yeah, it makes sense. But you still need to be close and you need a fiber connection. Do you have FTTC or FTTP in your flat?

 **Sude** ⌚ 00:41:56:25 - 00:41:58:00

Yes, FTTP.

 **Rifat** ⌚ 00:41:59:07 - 00:42:27:11

Fiber to the premise. You saw the glass cable or there is no glass cable. The glass cable is the premise or to the cabinet. What he needs is to the premise. He needs a fiber cable in an internal Ireland network that can send very fast queries, but you still need to be in the data center, right, Bora? If you are not in the data center, it won't be still fast. Is that correct?

 **Bora** ⌚ 00:42:29:28 - 00:42:32:19

Yeah, it will be data center actually.

 **Bora** ⌚ 00:42:34:08 - 00:42:37:29

Home doesn't work from home.

 **Rifat** ⌚ 00:42:37:29 - 00:42:43:07

Even though she's in Ireland, you need to be close to the data centers.

 **Rifat** ⌚ 00:42:44:07 - 00:43:04:12

So that is your case of what everybody has a different use case to be able to do it. If I were Mariana, you have lots of emails and a long business career. Are you going to collect those data and create your second brain digit or you are not going to start from scratch?

 **Marianna** ⌚ 00:43:09:10 - 00:43:11:16

I definitely should manage emails.

 **Rifat** ⌚ 00:43:13:07 - 00:43:23:11

Are you going to be able to use those contacts or you think those contacts are dead? You need new set of contacts, new set up relation.

 **Marianna** ⌚ 00:43:23:11 - 00:43:26:26

Now, if we are talking about valuing pro.

 **Rifat** ⌚ 00:43:28:04 - 00:43:30:17

Any of your second brain or AI.

 **Marianna** ⌚ 00:43:30:17 - 00:43:39:04

But the old one, I think that I can use from my previous business.

 **Marianna** ⌚ 00:43:41:00 - 00:43:43:20

Yeah, there are so many emails.

 **Sude** ⌚ 00:43:43:20 - 00:43:53:14

You can create some routine for the inside of the code work cloud cover. And then you can take the raw data

 **Sude** ⌚ 00:43:54:19 - 00:44:05:27

from the your emails and put the raw data into the obsidian folder. So you can manage the this raw data inside of the obsidian.

 **Sude** ⌚ 00:44:06:28 - 00:44:08:10

Easily, I think.

 **Rifat** ⌚ 00:44:08:10 - 00:44:34:07

Can you show us your screen so there's so they are Maria and that they normally show their screen and let's see how you think about it. And let's see if you can we can help you do it. We are trying to not lecture you or not force you on doing this. If you feel like it, you can show it. I shouldn't ask people to show it because the last time I asked the I've been is I've been is is not coming back.

 **Sude** ⌚ 00:44:35:10 - 00:44:38:22

It says that I'm waiting for an actual.

 **Rifat** ⌚ 00:44:38:22 - 00:44:53:21

But I don't know that I shouldn't for people should. She was hearing the so they were sharing card screenshots. Maybe we might be able to give feedback to her.

 **Sude** ⌚ 00:44:53:21 - 00:44:56:29

It says that I'm waiting for an approval close.

 **Rifat** ⌚ 00:44:58:10 - 00:45:16:22

All right. I need to learn how to approve you. So they are being approved. Hello screen sharing. All right. I learned how to allow screen sharing. I will allow everybody to do screen sharing. I didn't know this. So I'm learning this process.

 **Sude** ⌚ 00:45:16:22 - 00:45:20:04

Can you see the screen?

 **Rifat** ⌚ 00:45:20:04 - 00:45:22:09

Yes, we can see your screen.

 **Sude** ⌚ 00:45:23:16 - 00:45:25:05

In here in my

 **Rifat** ⌚ 00:45:25:05 - 00:45:28:22

office is your new obsidian right. The obsidian that you create.

 **Rifat** ⌚ 00:45:29:22 - 00:45:30:01

All right.

 **Sude** ⌚ 00:45:30:01 - 00:45:56:28

In here I pulled the raw data from the cloud cloud chat content into this staging folder. And once this comes to the staging folder, it automatically separates this raw data into the categories and subcategories into this concept folder. At the same time, it creates simple AI nodes in this nodes folder.

 **Sude** ⌚ 00:45:58:02 - 00:46:11:14

And it's once this process is finished, it creates a reminder section, a reminder table for me in here. But it's in Turkish right now. So I can.

 **Rifat** ⌚ 00:46:12:16 - 00:46:18:07

No, no, they're sorry. I'm not saying Mariana. Mariana knows Selgillem, Ashkum.

 **Marianna** ⌚ 00:46:18:07 - 00:46:19:26

Selgillem, Ashkum.

 **Rifat** ⌚ 00:46:19:26 - 00:46:23:02

She knows the main keywords. She knows all of them.

 **Marianna** ⌚ 00:46:23:02 - 00:46:24:16

Any severe room.

 **Rifat** ⌚ 00:46:26:17 - 00:46:41:07

She knows it. Don't worry. I get a question for you. This is your web interface. The point is, is this in Ireland so that the workers that have. What is the workers that have? Is this a hosting solution?

 **Sude** ⌚ 00:46:41:07 - 00:46:42:20

It's cloud flash.

 **Rifat** ⌚ 00:46:44:07 - 00:46:53:02

It is cloud flare. You deployed it onto cloud flare. Yeah. How did you deploy this on cloud flare and show this on cloud flare to us?

 **Sude** ⌚ 00:46:53:02 - 00:46:57:13

Okay. I created an account in cloud flare.

 **Rifat** ⌚ 00:46:57:13 - 00:47:00:26

And is this free on cloud flare for you?

 **Sude** ⌚ 00:47:00:26 - 00:47:01:22

Yeah.

 **Rifat** ⌚ 00:47:01:22 - 00:47:04:14

Yes. What is it?

 **Marianna** ⌚ 00:47:04:14 - 00:47:06:13

Cloud flare. What is it?

 **Rifat** ⌚ 00:47:06:13 - 00:47:18:16

There is nothing free. I'm a cloud flare for my company. Which is this. I shouldn't give details. But nothing is free in life. They will make you get hooked.

 **Rifat** ⌚ 00:47:19:26 - 00:47:37:15

After a while, you will be like, yeah, we got this. But it is good though. You got this cloud flare. And it is running this UI. And you are running the HTML. Can you run back-end applications on cloud flare? Or just HTML?

 **Sude** ⌚ 00:47:38:21 - 00:47:48:20

Yes. Yes. But for now, my website is just include HTML. But I wanted it to turn the back-end.

 **Rifat** ⌚ 00:47:50:02 - 00:48:05:11

All right. It is right now. So open your web application again. All right. Which is if I wanted you to be able to add a search, how are you going to add search so that you hear? Search,

 **Sude** ⌚ 00:48:05:11 - 00:48:11:26

but button is not enabled now. I couldn't edit. Yes. But I will add it.

 **Rifat** ⌚ 00:48:11:26 - 00:48:20:07

Mariana, would you like to guide us how to add this? Or I will guide if you guys want to guide. No.

 **Marianna** ⌚ 00:48:21:09 - 00:48:22:03

I didn't know that.

 **Rifat** ⌚ 00:48:22:03 - 00:48:27:19

Open Obsidian. Yeah. You can open there. Which tool you are using?

 **Rifat** ⌚ 00:48:29:03 - 00:48:44:18

Cloud. Cloud. Write cloud. Enter. Enter. So everybody knows how to use this, I guess, in the terminal phase. Your login expires in one day, auto mode. Write add a search button on the index HTML.

 **Rifat** ⌚ 00:48:46:02 - 00:48:57:09

Add the search button on the index HTML. Index HTML. And use colors. And use colors and emojis. I like emojis and colors.

 **Rifat** ⌚ 00:48:58:12 - 00:49:01:20

We need to turn this into a party. It is too much lecture.

 **Rifat** ⌚ 00:49:03:25 - 00:49:05:12

People are running away.

 **Rifat** ⌚ 00:49:06:26 - 00:49:38:16

Yes. Let's see this search button. And it will automatically understand that it's going to search the data and give you this. So this is the new world is being able to do this easily and being able to, if this is the second brain search, this is an Obsidian vault, not a classical repo. There is no index HTML at the top level. Let me check the web app and the index directors. There is no index HTML. So how did you deploy this to home pages this one?

 **Sude** ⌚ 00:49:38:16 - 00:49:45:10

So I deployed just this web app.

 **Rifat** ⌚ 00:49:45:10 - 00:50:31:14

Yes. Very good. So after a while, you need to know where these are because I didn't know. But I knew that it was a web app. And I knew that that was index HTML. So it is reading there. So what I do, it is I always learn new stuff. So I am reading what the cloth is doing right now. It is trying to find the location of your source code. And it is going to add the search over there. And then you need to write deploy and enter. So you need to make sure after the search is added, right? Deploy, enter. It needs to go ahead and deploy what it's doing in the background. What the issue is right now, if you write deploy and enter,

 **Rifat** ⌚ 00:50:33:04 - 00:51:24:05

deploy, deploy, it is going to enter. So what it's going to do, it is after adding the search button, it will understand that there's a connection to Cloudflare, which you already have. And it is going to do it in a fast way. But your problem here is you are using 6,000 tokens on here. With me, this costs much less tokens. And I will be able to deploy this right now. The reason is I know where the code is. And I can refer and give the details much faster to the AI. AI is writing the code for you. It added a search box for you. Then it is going to update that file. Then go to Cloudflare and deploy it. You deployed it using the AI. Is that correct, Cloudflare?

 **Sude** ⌚ 00:51:24:05 - 00:51:25:10

Yes, yes.

 **Rifat** ⌚ 00:51:25:10 - 00:51:33:22

So this is going to become your life because as you heard Borah said, he's always changing strategies.

 **Rifat** ⌚ 00:51:34:26 - 00:52:02:05

Today you are adding search. You are adding emojis and colors. Once this program becomes more useful for you for self-learning, I'm using it for self-learning as well. I learned faster with the AI. Then you need to know how to manage this user interface and searches to make your life easier. Because if it takes 20 minutes versus if it takes 20 seconds, it's a big gap for you.

 **Sude** ⌚ 00:52:02:05 - 00:52:06:07

And it consumes too many tokens in here.

 **Rifat** ⌚ 00:52:06:07 - 00:53:18:15

Yes, Borah said the same thing. He said, I'm running out of tokens. If you give it ambiguous queries, it needs to load all of the context to memory. Once it loads all of the context, there is more GPU time, CPU time, and the electricity getting used. Then you are going to have a hard time. So being able to cherry pick, that is very critical word, cherry pick, where your code is, where your error is going to be your main superpower in the future. You need to write down where your web app is. You need to remember and learn how it is deploying it. So the next time you go in, it should be able to do this much faster. Right now it runs Clodin Chrome. That is the extension that you are using. We installed those extensions and skills that it is going to open a Clod tab. Open that tab. As you see, it should start adding, yes, click that tab and click on a cipher on the right one. Right hand side.

 **Rifat** ⌚ 00:53:19:17 - 00:53:20:09

Yes, that one.

 **Rifat** ⌚ 00:53:21:10 - 00:53:25:21

Scroll up. It created a search on the tab properly. Probably.

 **Rifat** ⌚ 00:53:27:20 - 00:53:48:16

On the local, it's trying to, right now, create a server. Run the server, add the search and be able to edit right now. Look, there is the search. It's adding in Turkish. It means search, Mariana, but it's able to add the search. Once it deploys it, it is going to deploy it to Clodin.

 **Sude** ⌚ 00:53:50:08 - 00:53:51:02

And we can,

 **Sude** ⌚ 00:53:52:09 - 00:53:56:08

what did you say? I couldn't get it. What is your risk?

 **Sude** ⌚ 00:53:58:10 - 00:54:00:01

Risk about what?

 **Rifat** ⌚ 00:54:00:01 - 00:54:09:07

Such as Borat doesn't want his formulas to be opened by the public. But right now, I can go to your website and get everything.

 **Sude** ⌚ 00:54:09:07 - 00:54:25:07

Yes, because I settled that with respect to it for the first page. I say that it's okay for people who can see it. But for the next page,

 **Sude** ⌚ 00:54:26:24 - 00:54:32:15

I know where can I...

 **Rifat** ⌚ 00:54:32:15 - 00:54:33:28

Secure it.

 **Sude** ⌚ 00:54:33:28 - 00:54:36:05

Secure it, yes, from here.

 **Rifat** ⌚ 00:54:36:05 - 00:54:39:05

There is something called zero trust.

 **Sude** ⌚ 00:54:40:12 - 00:54:42:00

Yes, from here, I guess.

 **Sude** ⌚ 00:54:43:02 - 00:54:44:15

From access button, yes.

 **Rifat** ⌚ 00:54:44:15 - 00:55:04:15

From access or from something, protect the server. Well, behind the access button. Not like you said it right now, it's going to confuse you. The zero trust, it's going to open up all these pop-ups. Did you get the search? Check your search. Did it deploy? Check Clod first.

 **Rifat** ⌚ 00:55:07:19 - 00:55:08:05

Did it finish?

 **Rifat** ⌚ 00:55:09:10 - 00:55:11:16

How many tokens did you use right now?

 **Sude** ⌚ 00:55:12:23 - 00:55:13:29

16, I guess, yeah.

 **Rifat** ⌚ 00:55:13:29 - 00:55:15:17

60,000.

 **Sude** ⌚ 00:55:15:17 - 00:55:17:13

60,000.

 **Rifat** ⌚ 00:55:17:13 - 00:55:21:13

Check your web app, see if your web app gets deployed.

 **Rifat** ⌚ 00:55:24:17 - 00:55:26:26

Yes, check it. Do you have search?

 **Sude** ⌚ 00:55:28:25 - 00:55:29:01

No.

 **Rifat** ⌚ 00:55:29:01 - 00:55:30:02

Here is your search.

 **Rifat** ⌚ 00:55:32:15 - 00:55:35:20

Take the URL from the top. Take the URL from the top.

 **Rifat** ⌚ 00:55:37:07 - 00:55:41:06

Control C, yes, Control C. Ask Clod, where is my search?

 **Rifat** ⌚ 00:55:42:16 - 00:55:44:23

Paste, where is my search? And deploy.

 **Sude** ⌚ 00:55:47:07 - 00:55:49:19

Do I need to write a deploy?

 **Rifat** ⌚ 00:55:49:19 - 00:56:09:14

Deploy, yes. It needs to understand deploy. You are asking where is my search and deploy. It will understand. And it has to be able to deploy it. Because probably you didn't create a CI CD system, continuous integration and continuous delivery system, that it is not deploying automatically.

 **Rifat** ⌚ 00:56:10:17 - 00:56:32:17

So right now you gave the URL of the worker URL. It's going to understand this is a cloud flare system, because from the workers that live, then it will probably understand and be able to deploy this. As you see, it says I'm allowed by this. But I think you say you are deploying with configuration.

 **Sude** ⌚ 00:56:34:11 - 00:56:37:07

But I couldn't get it.

 **Rifat** ⌚ 00:56:37:07 - 00:56:48:22

It says it is live. I just fetched the URL directly and array is there. You need to hit shift, refresh, shift, hit shift first.

 **Rifat** ⌚ 00:56:49:25 - 00:56:57:16

Then hit refresh. Aura will come over there because your cookies are not there. Shift, refresh.

 **Rifat** ⌚ 00:56:58:20 - 00:57:01:00

Or control, refresh, shift, save in those parts.

 **Sude** ⌚ 00:57:02:02 - 00:57:04:01

Hard refresh comment, I forgot.

 **Sude** ⌚ 00:57:11:10 - 00:57:12:00

Okay.

 **Rifat** ⌚ 00:57:12:00 - 00:57:14:26

Control, refresh, control, shift, shift.

 **Rifat** ⌚ 00:57:16:00 - 00:57:22:08

There should be a search coming up. Search is over there. Try to search. Does it work?

 **Rifat** ⌚ 00:57:23:28 - 00:57:26:01

Try to have a scope. Yeah,

 **Rifat** ⌚ 00:57:27:11 - 00:57:44:13

it's able to search. So you are able to deploy it. You are able to search. Mariana, are you interested on doing this kind of search back-end stuff, like be able to find out all your past customers on the mobile, or do you need to secure them, Mariana?

 **Marianna** ⌚ 00:57:46:21 - 00:57:54:11

No, I definitely, I will need a search system on my website.

 **Rifat** ⌚ 00:57:55:20 - 00:58:00:22

All right. Yeah. I want them on your website to unveil a link prompt, for example.

 **Marianna** ⌚ 00:58:00:22 - 00:58:02:19

Yeah, but to

 **Marianna** ⌚ 00:58:03:27 - 00:58:06:28

do search on the email as well.

 **Marianna** ⌚ 00:58:08:23 - 00:58:14:25

But you know, what was difficult for me, I really don't see the clear

 **Marianna** ⌚ 00:58:16:24 - 00:58:49:16

capabilities between all these systems and how to connect them. That's why I'm attending our sessions, because I'm getting more information about the AI systems and all capabilities and everything that I can use. And you know, like piece by piece, I'm gathering information and it gives me better understanding what I can build, like how I can use all these functionalities.

 **Rifat** ⌚ 00:58:51:01 - 00:58:52:19

All right. Such as

 **Rifat** ⌚ 00:58:53:27 - 00:59:17:23

what we can do as an example, Bora said he is interested in the data centers in Ireland. And do you think you will, how do you think you can find the data centers in Ireland using a second brain? And why do you think the second brain will be a better use rather than just going and doing the search?

 **Marianna** ⌚ 00:59:20:26 - 00:59:21:21

Data center.

 **Rifat** ⌚ 00:59:21:21 - 00:59:24:23

Data centers. Bora said he needs data.

 **Marianna** ⌚ 00:59:24:23 - 00:59:30:23

There is already data center with all data available that I can do search.

 **Marianna** ⌚ 00:59:32:16 - 00:59:34:09

Because I don't understand honestly.

 **Rifat** ⌚ 00:59:34:09 - 00:59:51:15

Yes. Bora said for him to be able to do high speed trading, he needs data centers. He's spending his money to set up a VPS, virtual private server. But he needs to have a database to be able to make his decisions. Because

 **Marianna** ⌚ 00:59:51:15 - 01:00:01:22

he needs more, sorry for interrupting, but it doesn't mean that he needs more data to proceed with, to be able to make a better decision.

 **Rifat** ⌚ 01:00:02:24 - 01:00:44:23

Yes, but such as there is 10 data centers in Ireland, they are not at the same distance to the main server. So he needs to be able to set up a system that he needs to know which data center is the closest and be able to give it. Because every data center will come to Bora and say, "Bora come to us, spend money with us. We will give you the best. We are the best. Everybody will say the same thing. Because everybody wants to be able to sell. How can you use Mariana to set up a second brain system to be able to make sure you get the fastest connection so you can open up faster trades?"

 **Marianna** ⌚ 01:00:45:25 - 01:00:55:05

They mean the system all the time checking which database? But it's expensive probably if the system all the time is checking. You have to pay for that.

 **Rifat** ⌚ 01:00:55:05 - 01:01:20:09

But he is every day opening up positions in this play store. So that is his job. He says, "My job is opening up positions. And if I open the scalping position, scalping is like a fish jumping on top. He is trying to catch the fish on the top. The speed is vital for him. If he is slow, other people will catch the fish before he does that.

 **Marianna** ⌚ 01:01:20:09 - 01:01:27:00

It's like investments, right? Like if he can build a faster system, like faster decision-making?

 **Rifat** ⌚ 01:01:27:00 - 01:01:54:02

Does he need a faster system or does he need some kind of a system such as through the opened up the cloud flare that is one data center? Bora has a VPS that is another data center. Does he need all the information of the data centers in his second brain? Or do you think he can just go ahead and check the chat GPT and get the results?

 **Marianna** ⌚ 01:01:54:02 - 01:02:06:10

No, I don't think the chat GPT is there, like it's in between. Why should he go to chat GPT if he can get information from the source?

 **Marianna** ⌚ 01:02:07:25 - 01:02:10:23

No, I think the chat GPT is a longer way.

 **Rifat** ⌚ 01:02:10:23 - 01:02:48:28

Yes, chat GPT is always a longer way. No, the reason that I'm saying is his service right now in the A data center, but he needs all the other data center informations. And he also needs setup informations in all of those other data centers. Because if his data center goes slow, he should be able to deploy his code like the SUD did to another data center in Ireland, set the system up and start trading from there. Do you have those kind of backups Bora or you don't?

 **Bora** ⌚ 01:02:52:07 - 01:03:00:08

I don't know, but they just guarantee a 99% up. So, yeah, they guarantee that.

 **Rifat** ⌚ 01:03:00:08 - 01:03:08:18

But what about the latency? You said being close is very important. Do you check them or you don't check them?

 **Bora** ⌚ 01:03:12:07 - 01:03:31:06

They currently wait and say as well because they are selling it for the financial companies. So it's financially available, aware of financial things running on those servers.

 **Bora** ⌚ 01:03:32:07 - 01:03:42:15

So they know how the latency is. It's supposed to be very high speed.

 **Rifat** ⌚ 01:03:43:16 - 01:03:44:26

But you are not checking them.

 **Rifat** ⌚ 01:03:46:06 - 01:03:52:04

I thought that was important, but are you checking their latency or you are just trusting them?

 **Bora** ⌚ 01:03:52:04 - 01:03:59:29

The code is checking already latency and then it's just getting the positive.

 **Bora** ⌚ 01:04:01:07 - 01:04:03:00

Yeah, they check it.

 **Rifat** ⌚ 01:04:03:00 - 01:04:06:05

And if the latency is both your trades.

 **Bora** ⌚ 01:04:10:17 - 01:04:13:10

If the latency is very high,

 **Bora** ⌚ 01:04:14:26 - 01:04:16:19

I cannot put the position.

 **Rifat** ⌚ 01:04:17:20 - 01:04:30:01

You cannot put the position. So do you think SUD can be right to be able to do this? Such as the can you do that Mariana if the latency is...

 **Marianna** ⌚ 01:04:30:01 - 01:04:34:20

No, I cannot do this. Maybe SUD can do this.

 **Rifat** ⌚ 01:04:34:20 - 01:04:55:01

Think about your own use case such as latency. I'm swimming in the pool. I need to go 16 times back and forth. That is my own latency. You go and do sports in the gym. What is your latency that you can put into your second brain that you need to keep track of?

 **Rifat** ⌚ 01:04:56:20 - 01:04:59:05

For me? For anyone?

 **Sude** ⌚ 01:05:02:18 - 01:05:11:00

My latency is pulling the raw data if they are too big.

 **Sude** ⌚ 01:05:12:10 - 01:05:26:20

So it will be some issue about it. But I solve this issue with respect to the date time. So I say that if the date time the changing file is...

 **Sude** ⌚ 01:05:28:24 - 01:05:45:01

If the pin chat didn't change with respect to the last checking time, you just skip the folder and not process this folder. So it gains me some time from there.

 **Marianna** ⌚ 01:05:45:01 - 01:05:56:06

But in Boris' case, but for him it's just a very crucial day.

 **Bora** ⌚ 01:05:57:28 - 01:06:00:18

We are talking about milliseconds.

 **Marianna** ⌚ 01:06:00:18 - 01:06:06:11

You don't have time just to check, to wait.

 **Marianna** ⌚ 01:06:07:11 - 01:06:08:24

You don't know.

 **Rifat** ⌚ 01:06:08:24 - 01:07:06:23

Yes, it depends on the use case. I'm always, as everybody watching this war in Hormuz, such as Americans lost the war because these aircraft carriers are not coming very close to Persian Gulf. They are far, far away. They are not in the action. Do you guys know why? Because the missiles that the Iranians are shooting has a timeline to hit those ships. So Americans are always far, far away. But if you are far away, you are also unable to protect the ships that are close by on the Strait of Hormuz. So that can be your poly-market stuff. Are you doing poly-market stuff about the Hormuz or you are not doing political stuff for us?

 **Bora** ⌚ 01:07:09:17 - 01:07:13:10

I'm on the sports and the weather market.

 **Rifat** ⌚ 01:07:13:10 - 01:07:24:11

Ah, sports and weather. Would you like to be able to show us about this Hormuz market? I'm interested. Or I will share my screen. You tell me where to go.

 **Rifat** ⌚ 01:07:26:16 - 01:07:31:07

Can I share my screen? And you tell me where to go in poly-market? Are you going

 **Bora** ⌚ 01:07:31:07 - 01:07:33:26

to go in the poly-market?

 **Rifat** ⌚ 01:07:33:26 - 01:07:53:14

Yeah, I will go to poly-market. I did it in the past for people who don't know what the poly-market is. Poly-market is this. Poly-market, this is elections. But I can find the war as a right. There should be war-related stuff.

 **Rifat** ⌚ 01:07:54:15 - 01:07:56:28

High temperature, US authorized.

 **Rifat** ⌚ 01:07:57:28 - 01:08:05:28

War Iran. Do they let the Iran regime fall before 2027?

 **Rifat** ⌚ 01:08:07:11 - 01:08:10:05

So what is this war we are looking at?

 **Bora** ⌚ 01:08:12:24 - 01:08:13:19

So you can bet.

 **Bora** ⌚ 01:08:16:00 - 01:08:19:20

You can also buy the steers.

 **Rifat** ⌚ 01:08:21:03 - 01:08:23:29

Nobody thinks Iran will fall. Is that correct?

 **Rifat** ⌚ 01:08:25:16 - 01:08:36:06

Is that correct? Is that correct? Like when I said America won the war, I am correct. Is that correct? Nobody thinks Iran is losing.

 **Rifat** ⌚ 01:08:37:09 - 01:08:43:06

On here people think that they were going to lose. Is that correct? What is this timeline?

 **Rifat** ⌚ 01:08:44:12 - 01:08:53:10

January, in the beginning of the year, everybody thought America is going to win. Right now nobody thinks America is going to win.

 **Bora** ⌚ 01:08:53:10 - 01:08:55:21

Yeah, it changes.

 **Rifat** ⌚ 01:08:55:21 - 01:09:09:01

And it made 24 million dollars. Is that correct? This is 24 million dollars has been betted on it. But how do I make money out of this? Do I wait till 2027?

 **Bora** ⌚ 01:09:10:01 - 01:09:22:03

How does it result? It resolved at the beginning of 2027. So you have to wait until then.

 **Bora** ⌚ 01:09:23:12 - 01:09:31:18

But between those times, you can buy and sell the shares. They are selling the shares.

 **Bora** ⌚ 01:09:32:24 - 01:09:36:05

You don't have to wait for that. You don't have to wait. I

 **Rifat** ⌚ 01:09:36:05 - 01:09:42:06

have not done this before. Let's do it and let's learn.

 **Rifat** ⌚ 01:09:43:13 - 01:09:44:01

It's so funny.

 **Rifat** ⌚ 01:09:45:02 - 01:09:46:11

I am going to Ukraine.

 **Rifat** ⌚ 01:09:48:06 - 01:09:52:22

Ukraine, will Ukraine reenter or what? I don't know these.

 **Rifat** ⌚ 01:09:53:27 - 01:09:56:22

I am supposed to open up this.

 **Rifat** ⌚ 01:09:58:23 - 01:10:09:28

I opened up the account. I got it. No, Iran came back. So what is the answer? I say 7 cents a month with one dollar.

 **Bora** ⌚ 01:10:09:28 - 01:10:21:26

But I don't think you can trade from the UK. It's bad. It is forbidden from the UK. Yeah, from the UK. You cannot trade. That's why I am using Ireland.

 **Sude** ⌚ 01:10:21:26 - 01:10:23:26

You can use VPN.

 **Bora** ⌚ 01:10:26:08 - 01:10:29:01

But I cannot use VPN.

 **Rifat** ⌚ 01:10:30:01 - 01:10:32:26

A restricted region, this one.

 **Bora** ⌚ 01:10:32:26 - 01:10:35:15

Yes, you can use it.

 **Bora** ⌚ 01:10:36:23 - 01:10:36:29

Yeah.

 **Rifat** ⌚ 01:10:36:29 - 01:10:41:21

All right. So the UK is restricted from trials.

 **Marianna** ⌚ 01:10:42:29 - 01:10:44:01

So there, can you?

 **Sude** ⌚ 01:10:45:08 - 01:10:48:10

But I am in Ireland, in the UK too.

 **Rifat** ⌚ 01:10:49:15 - 01:10:52:12

Yes, right. You are Northern Ireland?

 **Sude** ⌚ 01:10:52:12 - 01:10:55:03

Yeah, I am out of the...

 **Rifat** ⌚ 01:10:55:03 - 01:10:57:18

No, you are not in the UK.

 **Sude** ⌚ 01:10:57:18 - 01:10:59:10

You are in Ireland.

 **Rifat** ⌚ 01:10:59:10 - 01:11:29:07

You should be able to do it. But don't do it or do it. I was just curious about it. So there is also the restrictions. Everybody has a different use case to be able to do this. Not one use case to be able to do it. Maria and I was going through my mind. Would you like to see how you can create your contacts on your second brain, from your Gmail of your Ukrainian account?

 **Rifat** ⌚ 01:11:33:16 - 01:11:35:07

Do you have a CRM for yourself?

 **Marianna** ⌚ 01:11:37:15 - 01:11:44:28

CRM? You know what I would like to do? I would like to do CRM for my ValleyLink Pro Gmail.

 **Rifat** ⌚ 01:11:46:08 - 01:11:53:07

ValleyLink Pro. Would you like to share your screen so we can guide you? Or you can do it and we can watch you?

 **Marianna** ⌚ 01:11:56:02 - 01:11:57:05

You can.

 **Marianna** ⌚ 01:11:58:22 - 01:12:03:13

Just give me a second. I will share my screen

 **Marianna** ⌚ 01:12:04:24 - 01:12:06:00

here.

 **Marianna** ⌚ 01:12:09:21 - 01:12:10:08

Yeah.

 **Marianna** ⌚ 01:12:11:29 - 01:12:21:07

But I don't think it will if you have... But you know what? Then I have to open my different email.

 **Rifat** ⌚ 01:12:22:07 - 01:12:31:29

Not from here though. You don't need to do it from here because the AI will open it up for you. Go back to your obsidian.

 **Sude** ⌚ 01:12:33:11 - 01:12:36:29

Maybe you can create new work for your new project.

 **Rifat** ⌚ 01:12:38:00 - 01:12:41:05

Yes. Where is your cloud loaded in Mariana?

 **Marianna** ⌚ 01:12:41:05 - 01:12:47:15

My cloud is not paid right now. It will not proceed. Let's skip that.

 **Rifat** ⌚ 01:12:47:15 - 01:12:52:06

Would you like me to do it so you can watch it from my end?

 **Marianna** ⌚ 01:12:52:06 - 01:12:53:15

Yeah, I can.

 **Rifat** ⌚ 01:12:55:01 - 01:12:56:01

Let me do it

 **Rifat** ⌚ 01:12:57:16 - 01:13:04:26

on my end. My problem is I have 300,000 people on my account. I have way too many.

 **Rifat** ⌚ 01:13:06:05 - 01:13:10:29

So what I will do it is... So the thing that I wanted to say for

 **Rifat** ⌚ 01:13:13:06 - 01:13:34:21

Bora, my second brain, this is my own second brain, and I have around 100,000 documents on here. So there is way too many documents on here. But what I do it is, this is insight. I use the anti-gravity and Gemini SL.

 **Rifat** ⌚ 01:13:36:23 - 01:13:45:20

Gemini, anti-gravity and cloth and grok. I use multiple of them. So this is the Gemini 3.7.

 **Marianna** ⌚ 01:13:45:20 - 01:13:48:03

Anti-gravity, what is it?

 **Rifat** ⌚ 01:13:49:08 - 01:13:51:20

Anti-gravity is the tool from Google.

 **Rifat** ⌚ 01:13:52:22 - 01:14:20:28

So there is the anti-gravity is what the Google is selling. Google uses anti-gravity. Anthropic uses cloth. Open Air uses cloth. So everybody has a different name for their agents because I use most of them. This is one of them that I use. What I will do it is create a folder in resources for the contacts, for the contacts,

 **Rifat** ⌚ 01:14:22:01 - 01:14:25:09

contacts if they are not there.

 **Rifat** ⌚ 01:14:26:21 - 01:14:37:13

Then what I do it is, I always write them like this. I will be able to write the tasks one by one, connect to info at pexavo.com

 **Rifat** ⌚ 01:14:39:11 - 01:14:43:18

and look at my send folder

 **Rifat** ⌚ 01:14:44:26 - 01:14:51:06

and find the contacts that I am regularly

 **Rifat** ⌚ 01:14:53:23 - 01:14:54:20

talking to.

 **Rifat** ⌚ 01:14:56:08 - 01:14:59:05

The other task, get those

 **Rifat** ⌚ 01:15:00:22 - 01:15:09:06

accounts. Accounts is a mark on documents and add the email

 **Rifat** ⌚ 01:15:10:17 - 01:15:20:23

subject and our conversation summary to those contacts.

 **Rifat** ⌚ 01:15:23:00 - 01:15:23:21

Task,

 **Rifat** ⌚ 01:15:25:06 - 01:15:29:21

do only 10 of them

 **Rifat** ⌚ 01:15:32:25 - 01:15:33:08

and

 **Rifat** ⌚ 01:15:34:08 - 01:16:52:20

create every post. So what I told this, in my resources folder because the para has four folders, projects, areas, resource, archive, I said put them onto the resources folder so I will be able to refer this back. So once this kicks off, it will start kicking off and I will share with you guys once it finishes. So I could have made this as a project. I didn't make it as a project because the project always has a timeline. This is like a hermes job, an agentic job that needs to work in the background because in life I'm always building up new contacts. I met with Bora four or five months ago from Cheram, from Zainab. So they were my contacts. They referred me to Bora. I met with Bora. If I had an agent in my areas, collect all the communications from my WhatsApp, from my emails, it will be able to edit because it's not doing it. Right now I'm doing it and I gave the Gemini the access to be able to do it. So that was my whole game plan to be able to do it by adding the access. So it's created first of all the Python and the test Gmail.

 **Rifat** ⌚ 01:16:54:07 - 01:18:33:28

My advantage here is, as you guys see, it connected to my keyboard directly on here. So the main difference between my setup and the other setups are, in the beginning of my sessions, my computer knows I have around 800 passwords that are already saved in a key vault. So the system knows where to get the password. So my system works very fast. Unlike SUDES, it's like thinking that I need to put my search. No, it already knows where the password is. It already knows where the Google is. It already knows which tools to follow. This is faster and cheaper than what Bora is using, the Hermes, because I exactly know where it is going to go. Still Hermes has to think and guess and use the tokens about it because the passwords are unknown. Which code is going to get triggered is unknown. And there is no archive if Bora did not create an archive. I have done this multiple times and every time I do this, I have an archive. So what it means is, the next time I'm going to run this, I already have a past memory, such as riding a bicycle for me. I'm always recording how I have written it before. If Bora is doing it, he can do the archive as his positions. He can create a pattern, understand what land is right, what land is wrong, and be able to sort it by itself. So let's look.

 **Rifat** ⌚ 01:18:35:12 - 01:18:43:16

It came to another one. It says "Analyze contacts". So it uses only 233 tokens,

 **Rifat** ⌚ 01:18:44:16 - 01:20:14:20

255 tokens. So it didn't use 50,000 tokens. And do not forget, I had 100 GB of data in here. 100 GB of data. So it is using these tools like being able to refer them. But the reason that it is able to do it is, I'm spending around 25 pounds to Neo4j, a graph database, where all the links are related. I am paying around 5 pounds to Quadrant, which does the semantic search. I am paying 5 pounds to Google Drive to do full-text search. So I'm not asking it to one database. I'm asking it to many databases. Your mind, your eyes have a visual memory. Your ears have an audio memory. Your emotions have a limbic memory. So your brain is not only one memory system. These are all different types of memory systems that you should be able to use and go ahead and do the action. I'm stalling you guys in the background while this is trying to answer. So it's got more, 95 tokens. My token counts are small. The cloud does this much faster. But this is asking way too many questions. I could have automated it. But then it will...

 **Sude** ⌚ 01:20:14:20 - 01:20:18:11

Can you write again your databases to the chat?

 **Rifat** ⌚ 01:20:19:23 - 01:20:25:13

Yes, I will write the databases to the chat. But I will say it one more time.

 **Rifat** ⌚ 01:20:26:15 - 01:20:29:23

So first of all, the basic database is Grep.

 **Rifat** ⌚ 01:20:30:26 - 01:21:03:18

Grep is scanning the files and finding them. But because I have 100,000 files, 100 gigabytes, Greping all of them is not a question. Then Google Drive. Google Drive is a full-text search and an image search. I can say, "Give me all the lady pictures, all the ladies." "Give me all my receipts, all the receipts." "Give me where it writes my passport number." "It will give me passport number." I will show you guys the example on here, at the Google Drive.

 **Rifat** ⌚ 01:21:04:19 - 01:21:36:26

And this is my Google Drive. If I write my passport number invoice_pexable, it will be able to find the PEXABLE invoices very fast. Because it is coming from the Google Drive. And I put them onto the shared drives on here, as a second brain on here. And on this second brain, there is lots of files on here. 100,000 files. So there is not... Like, if I say this will... How many files are in this folder? How many files in this folder?

 **Sude** ⌚ 01:21:36:26 - 01:21:43:14

Is your collage... uses these files automatically from the CLI interface?

 **Rifat** ⌚ 01:21:43:14 - 01:21:58:10

Yes. I told Claude and Gemini how to use this. You guys have to trust me on this. There is 100,000 files. I will prove it to you guys by opening up another session on here.

 **Rifat** ⌚ 01:21:59:19 - 01:22:13:07

How many files are there? How many files are in this folder? So there is around 100,000 files coming up on here, on the right hand side.

 **Rifat** ⌚ 01:22:14:23 - 01:22:22:00

So this should... I'm retrieving all the message contacts. Summaries, it got the contacts.

 **Rifat** ⌚ 01:22:23:03 - 01:22:25:21

So what is the output result on here?

 **Rifat** ⌚ 01:22:27:00 - 01:22:38:01

So do you guys see 100,000 files? Do you guys see it? Yeah. And it got the files. But normally what I do is, I don't ask it like this. I say run dashboard.

 **Rifat** ⌚ 01:22:39:05 - 01:24:20:19

Once I say run dashboard to the system, it will open up a project, my dashboard, so I will be able to see the numbers a bit easier way like this. Archive, resources, areas, and projects, and all the numbers, and the projects comes up, and I have like an obsidian like user interface where I can see the things on my local. So what am I doing is, I'm creating all the mental paths so my queries get answered with minimum number of tokens, so I don't enter into Bora's issues of me running out of tokens because I can run out of tokens faster than you guys. I have 100 gigabytes and 100,000 files. So I have to be very good at where to look. But that causes me to use the third database, which is called Neo4j. Neo4j is a graph database where 100,000 files have more than 200,000 relationships, such as Bora is related to Karam. Karam is related to UK. UK is related to Ankara, Nashmasa, Ankara agreement. So these are all related. The Neo4j knows that. Then I have the quadrant, which is a semantic search. Find me all the humans. It's able to find everybody. Then the last one is the EDB, Enterprise Data DB, a relational database to be able to check the consistencies. Let's go back to Mariana's case if we are able to do it. So we ran this query.

 **Rifat** ⌚ 01:24:21:20 - 01:24:44:00

It is still running. It is faster, but as you guys see, tokens are not that much. You guys are seeing that, right? There's not that many tokens. My tokens are very... It's asking way too many questions because I'm using the Flash low version. The thinking version is more expensive. And you guys see it's created these six artifacts on here,

 **Rifat** ⌚ 01:24:45:18 - 01:24:46:28

resources, constraints.

 **Rifat** ⌚ 01:24:48:01 - 01:24:55:22

Let's go there. It is on resources. Contacts. Did you guys see? It's created all these contacts.

 **Rifat** ⌚ 01:24:57:11 - 01:25:05:21

Robin consultant, because I'm a contractor. I talk to these guys. And it's also creating a conversation on this robin guy.

 **Rifat** ⌚ 01:25:07:07 - 01:25:09:21

Do you guys see the ones that it's created?

 **Rifat** ⌚ 01:25:12:23 - 01:25:56:28

So what is the difference between me is this part. Lang chain, lang graph. So this is the last critical part that everybody has to use. I have five systems, but I have a limbic and a frontal cortex that uses lang chain and lang graph to be able to orchestrate this so I can get that data. I got all those 10 persons data, right? Mariana. I can easily go and tell my AI, send emails that I have this new cloud certified architect, send my latest CV to them. I can do that and the system will start sending them. Do you guys want to see that? Let's do it.

 **Rifat** ⌚ 01:25:58:09 - 01:25:58:27

So

 **Rifat** ⌚ 01:26:01:01 - 01:26:08:04

let's send it on here. Come back. It created those. For the recruiters, for the

 **Rifat** ⌚ 01:26:10:10 - 01:26:20:12

recruiters, send an email, mention I have just passed the cloud

 **Rifat** ⌚ 01:26:21:13 - 01:26:26:26

certified architect certification.

 **Rifat** ⌚ 01:26:29:27 - 01:26:45:04

I could help them as a forward deployed engineer and an architect for transformation.

 **Rifat** ⌚ 01:26:46:21 - 01:27:25:14

Let's chat about it. Send the email. Right now, when I say this, it will start doing this. Why it will start doing it? Because I have also the six database, the key vault. All of my passwords say there, it knows my email. It's going to send my email and it has all the API connections to my email system. So what does that mean? What do you think I did all of these on Monday? No. Mariana, I didn't do it on Monday. Every day, I first do my job with the second brain,

 **Rifat** ⌚ 01:27:26:18 - 01:27:27:21

then do the job.

 **Rifat** ⌚ 01:27:29:05 - 01:27:31:16

I do not send the emails by myself.

 **Rifat** ⌚ 01:27:32:22 - 01:27:35:06

So I am readier than Sudha.

 **Rifat** ⌚ 01:27:36:18 - 01:27:47:03

Yes. Such as once you need to send an email, you are sending it yourself, right, Sudha? Mm-hmm. I'm not doing that. I'm asking AI to send Sudha an email.

 **Rifat** ⌚ 01:27:48:20 - 01:27:50:07

How can I do that? Let's see.

 **Rifat** ⌚ 01:27:52:11 - 01:27:54:03

I will open up one more context.

 **Rifat** ⌚ 01:27:56:26 - 01:28:14:06

This is, yes, send an update email. Do you guys see it? It will send it to Libby. Priyana, Shivane, Zamar, Raguet. I have lots of people in here. So it is going to start sending them emails. Then they will send it to Sudha. There's my Gmail.

 **Rifat** ⌚ 01:28:15:27 - 01:28:59:02

So it will start sending emails to these people. I moved to send file on here. So they will start happening on here. So this was the previous email. They will start sending emails. But what I could say it is, send the email to Sudha, such as similar use cases are done by Bora. Bora are using these kind of transactions with the AI or you are programming them, then executing the transactions. Like, do you say go and open a position to harness and it opens up the position or you make your strategy, then do the action.

 **Bora** ⌚ 01:29:04:02 - 01:29:04:22

Actually,

 **Bora** ⌚ 01:29:05:24 - 01:29:10:17

both is doing all the opening positions.

 **Bora** ⌚ 01:29:11:17 - 01:29:13:25

I'm not doing anything manually.

 **Rifat** ⌚ 01:29:13:25 - 01:29:16:13

You are always telling the bot.

 **Bora** ⌚ 01:29:18:20 - 01:29:19:02

Yeah.

 **Bora** ⌚ 01:29:20:10 - 01:29:26:16

I'm just trying to build a bot with a strategy winner

 **Bora** ⌚ 01:29:27:17 - 01:29:34:13

bot. So my job is finding the right strategy.

 **Rifat** ⌚ 01:29:36:13 - 01:29:41:18

All right. So you focus on doing the strategy and AI does the execution.

 **Rifat** ⌚ 01:29:43:05 - 01:29:43:27

Yeah, exactly.

 **Rifat** ⌚ 01:29:45:00 - 01:30:07:07

So in our case, AI did the execution. AI did send all these emails, update, close, certify the exam for the deployed engineer. It did all these exams, but there is these problems. Do you guys see? Timothy Bush on skill could not be delivered because Timothy is not working here anymore.

 **Rifat** ⌚ 01:30:11:00 - 01:30:19:15

This address is not found. Robin Kay, Enterprise Solutions, Inc. is not working there anymore. Robin Kay.

 **Rifat** ⌚ 01:30:20:29 - 01:30:22:20

Robin, what was this Robin?

 **Rifat** ⌚ 01:30:23:22 - 01:31:01:21

Robin Kay, Enterprise Solutions, Inc. is not working there, but the AI was able to send emails. What is the risk here? I can enter into spam very, very easily because I'm automated the structure. And this is also true for Bora as well. If he is making the positions, the AI is opening the positions. If he starts losing the money, he can lose the money very fast. If I start getting into a banned position by sending these emails, I could get banned very easily. What I could tell them is,

 **Rifat** ⌚ 01:31:03:04 - 01:31:25:21

send one email and wait at least two, three minutes. And if the email gets bounced, like as you guys see many of them bounced, wait more, or I could add a step, search this Robin in Enterprise Company, make sure on LinkedIn he is still working there, then send him the message.

 **Rifat** ⌚ 01:31:27:25 - 01:31:34:10

So what Bora said is very important. You have to focus on doing the strategy,

 **Rifat** ⌚ 01:31:35:15 - 01:31:52:22

not the execution because sending the email is the easy part. Opening up the position is easy part, right, Bora? In the past, it might be problematic. Right now with Hermes, with all the API points, you don't have that kind of a problem, right?

 **Bora** ⌚ 01:31:54:14 - 01:31:59:23

Very easy. I mean, it's not a big deal right now doing that.

 **Bora** ⌚ 01:32:01:00 - 01:32:01:12

You know,

 **Bora** ⌚ 01:32:03:15 - 01:32:10:00

the cloud especially, they're very disciplined workflow.

 **Bora** ⌚ 01:32:11:27 - 01:32:14:27

First, he tries to explore, and then

 **Bora** ⌚ 01:32:16:19 - 01:32:25:14

do the planning, and then write the code, and then the execute. But first, it needs to verify

 **Bora** ⌚ 01:32:27:02 - 01:32:33:12

if there's an edge, if there's an alpha that is profitable. If

 **Bora** ⌚ 01:32:35:09 - 01:32:52:22

it doesn't see anything profitable, it doesn't do anything, it doesn't open any position. So first, first thing it does is verify the edge. If there's an edge, then execute the code.

 **Bora** ⌚ 01:32:54:05 - 01:32:58:10

That's very disciplined part of it, actually.

 **Rifat** ⌚ 01:32:58:10 - 01:33:06:09

Very risky world we are going into. Marianne is living in Ukraine. They are doing this AI warfare.

 **Rifat** ⌚ 01:33:07:18 - 01:33:40:09

What edge is like sending drones? If there's no threat, don't send the drones. But if there's a threat, there's an edge. Send the drone and kill that drone, because it's going to attack a building in Ukraine. That kind of a mindset, what I understand from what Boris says. If there's money to be made, you can open up that position. But you can also take that knowledge and also work as an FBA or a trader in other industries as well. Right, Boris?

 **Rifat** ⌚ 01:33:42:28 - 01:33:49:11

If there's a thing requiring a product and selling it on the real market, that's also an edge.

 **Bora** ⌚ 01:33:52:00 - 01:33:52:24

Yeah, it could be.

 **Bora** ⌚ 01:33:54:18 - 01:34:15:18

I was working on the algorithm trading. I was doing that by myself. Now, AI is trying to find the right algorithm to make money. That was the difference right now. I'm not

 **Bora** ⌚ 01:34:16:22 - 01:34:19:26

worrying about what algorithm will

 **Bora** ⌚ 01:34:22:00 - 01:34:30:09

make money. Right now, AI is just trying to find the right algorithm to make money.

 **Rifat** ⌚ 01:34:30:09 - 01:34:44:13

That was the difference. What I understand is there is AI and there's also the humans. Such as once we looked at, if I watch Fox News, Ahadar in Turkey, America is winning.

 **Rifat** ⌚ 01:34:46:25 - 01:34:49:19

If I look at the poly market, America is losing.

 **Rifat** ⌚ 01:34:51:19 - 01:34:56:25

The poly market is like people like yourself, smart people betting on this.

 **Rifat** ⌚ 01:34:58:10 - 01:35:08:13

Like Ahadar or CNN or these news that I watch is like people clueless. They are just making news. Did I understand it correctly or false?

 **Bora** ⌚ 01:35:10:27 - 01:35:11:18

Yeah, it's correct.

 **Bora** ⌚ 01:35:13:19 - 01:35:19:13

Most of the people are clueless about betting on

 **Bora** ⌚ 01:35:21:14 - 01:35:22:21

prediction markets.

 **Bora** ⌚ 01:35:25:01 - 01:35:27:04

But if

 **Bora** ⌚ 01:35:28:13 - 01:35:32:18

you find the right strategy, you can always win.

 **Bora** ⌚ 01:35:35:19 - 01:35:41:12

There is no possibility to lose it. But finding the right strategy is not easy.

 **Rifat** ⌚ 01:35:41:12 - 01:35:49:27

I will give you a bet if you want. But it will take you 20 years. Are you ready? Yeah.

 **Rifat** ⌚ 01:35:51:10 - 01:35:59:24

In the UK, there is a guy called Sinan Billinci. He is the CEO of Rolls Royce.

 **Rifat** ⌚ 01:36:01:28 - 01:36:04:11

He is building small modular reactors.

 **Rifat** ⌚ 01:36:05:12 - 01:36:11:22

And because of the AI, the energy consumption will rise.

 **Rifat** ⌚ 01:36:13:12 - 01:37:02:14

Because the UK does not have any hormones or any oil reserves, they will not be able to make energy with oil. And the wind always doesn't work and the sun cannot catch up with this AI usage. As you guys see, how much AI we are using. And everybody is running out of credit. My prediction is Rolls Royce with this 2.1 billion, they are going to do the small modular reactors and turn the UK into a nuclear giant. And what's it called? Rolls Royce's shares will skyrocket. But this is going to happen in 20 years. Is this a prediction or a bad prediction?

 **Bora** ⌚ 01:37:05:21 - 01:37:17:18

Well, it takes 20 years to re-love. So it could be a debt by that time.

 **Rifat** ⌚ 01:37:17:18 - 01:37:26:11

Yes, but think about Tesla. Tesla, if you entered Tesla or Bitcoin 20 years ago, you wouldn't have to work right now.

 **Bora** ⌚ 01:37:27:12 - 01:37:29:11

Yeah, you are right.

 **Rifat** ⌚ 01:37:29:11 - 01:37:36:13

For Sude, if I were you Sude, I would buy the Rolls Royce stock. Really?

 **Sude** ⌚ 01:37:36:13 - 01:37:37:21

Okay, I will buy.

 **Rifat** ⌚ 01:37:37:21 - 01:38:17:11

Yes, because the Rolls Royce, why am I saying this? My prediction comes from Rolls Royce operated the nuclear submarines for the last 50 years in the UK. Rolls Royce operates those submarines. And my prediction is these submarine designs will keep on working because there won't be any oil coming out of Iran. And the oil will be scarce. And we have something called in the UK, cold waters. You can cool down the reactors very easily.

 **Rifat** ⌚ 01:38:18:12 - 01:38:37:02

Especially the submarine small reactors very easily and not have a meltdown structure. So that is my prediction. But what do you need to do to make sure that this is a good prediction by using AI and the second brain? How can you do that?

 **Rifat** ⌚ 01:38:38:08 - 01:38:46:01

Like this could be something because if you don't want to be here with me like a white beard coming up and with normal,

 **Rifat** ⌚ 01:38:47:11 - 01:39:37:11

make your predictions useful. Because if you bet it on Tesla or on Bitcoin at your age on a consistent basis, you will be able to leverage your predictions. What Bora is trying to do, this is trying to do his predictions. My prediction is this AI will get used more and more and more. And I will share you guys as well that one that I created it. If you guys find that interesting, I will share you guys link. I did it on GitHub. I put my predictions to a test and I showed that to Mariana. I call this customer development. All these courses that I'm doing, all the school project, I have them ranked.

 **Rifat** ⌚ 01:39:38:12 - 01:39:44:03

And I put them on the confidence report and I score it.

 **Rifat** ⌚ 01:39:45:05 - 01:39:55:17

Every business decision that I make is based on hypothesis, that these hypotheses have a premise and a conclusion. And I score myself.

 **Rifat** ⌚ 01:39:56:18 - 01:40:25:08

And every version, sometimes I go up, sometimes I go down. I went as high as 46 and I was at 41. So every time I change the business, some of the factors change. I will put the link to the chat. So if you guys are interested, you guys should be able to see. And there is like around 20, 30 small changes that's happening. And it is my also prediction market.

 **Rifat** ⌚ 01:40:26:12 - 01:40:57:02

Like everybody is predicting on something else. And every time even this cohort right now that I'm doing with guys video is a prediction about the future and about now. I'm telling myself, I solve myself a story. If I work on AI, if I learn AI, and if I create the course, create a school, create a community, then the future might be brighter. And that is the confidence score. It goes through all hypotheses.

 **Rifat** ⌚ 01:40:58:11 - 01:41:13:23

And if you guys look at it, there is not only one hypothesis. There is multiple hypotheses, such as the one that I said about Royce Royce. Royce Royce needs to stay alive. They need to be able to get nuclear reactors,

 **Rifat** ⌚ 01:41:15:14 - 01:41:21:29

40,000 nuclear reactors all over the UK. Because they are small, they need to be so many.

 **Rifat** ⌚ 01:41:23:14 - 01:41:42:18

Then this is like a 20 year bet, 20 year prediction. It's a very, very long term prediction. Sculpting is daily, hourly, minutely. This is a 20 year prediction. So there is lots of hypotheses. And I'm using the AI to be able to run those hypotheses.

 **Rifat** ⌚ 01:41:43:29 - 01:41:56:17

And Mariana, you did your business. You can take that, take the website, fork it, pull it, and be able to do it. What do you think this kind of a hypothetical approach for your predictions?

 **Bora** ⌚ 01:42:02:09 - 01:42:04:23

Yeah, I mean, it could work.

 **Bora** ⌚ 01:42:08:04 - 01:42:12:27

I was going to ask you about something about second brain.

 **Bora** ⌚ 01:42:14:11 - 01:42:15:02

Are you

 **Bora** ⌚ 01:42:17:07 - 01:42:22:11

storing the full chat history to second brain?

 **Rifat** ⌚ 01:42:22:11 - 01:42:23:16

Yes,

 **Rifat** ⌚ 01:42:24:25 - 01:42:29:07

there is four parts. How do you know that? Projects is the timeline.

 **Rifat** ⌚ 01:42:30:11 - 01:42:34:22

Areas are agents. I have around 10 different agents like Hermes.

 **Rifat** ⌚ 01:42:35:25 - 01:42:37:15

Areas are the agents.

 **Rifat** ⌚ 01:42:39:00 - 01:43:15:08

And then resources like the contacts we created, that I'm always referring to, are the resources. Then archive is all the chat history. Every question that I asked, every path that I found, ends up on the archive. So every time I run the system, my system gets faster. And I use less tokens. Because the system already knows every time that it's going to create. But what is the problem? I have 100,000 files.

 **Rifat** ⌚ 01:43:18:03 - 01:44:07:00

And my number of files are extremely growing very fast. So I have to have these five, six different database systems to be able to manage them and put a length chain and a length graph in front of them. When I ask the questions, the question does not go to the database directly. It goes to the length chain and the length graph. Then it goes to the systems and gets a good answer. Such as, for example, Bora, Edward, they are asking me how they are going to do this migration. Such as, in your case, identity management system migration. They ask me the question. In less than three minutes, I give them like 50 tasks. With each task, even 10 sub-tasks.

 **Rifat** ⌚ 01:44:08:11 - 01:44:13:13

How to migrate an identity management server. And these are all correct tasks.

 **Rifat** ⌚ 01:44:14:17 - 01:44:23:26

Which department, which load balancer, which Linux gets deployed, which IP address. Because I have all the archive.

 **Rifat** ⌚ 01:44:25:05 - 01:44:27:10

All the chat. Do you see what I mean?

 **Bora** ⌚ 01:44:28:28 - 01:44:40:22

Once you have all the... Are you compacting the context or just full context is going to second brain, right?

 **Rifat** ⌚ 01:44:40:22 - 01:44:46:19

Yes, but look at this. I have five different resources.

 **Rifat** ⌚ 01:44:47:20 - 01:44:54:08

When I come to Google Drive, this is different than Neo4j. Neo4j is on FlyIO.

 **Rifat** ⌚ 01:44:56:00 - 01:45:15:05

Let me show the FlyIO. Neo4j has different kind of databases. Which is the FlyIO that it gets mentioned. A MongoDB, you guys see, an agent platform in the background. Which I can also start and stop from here.

 **Rifat** ⌚ 01:45:16:11 - 01:45:29:11

I can restart, start, stop, deploy them. These are all the machines that are running in the background. Look, there is quadrant. Do you see quadrant here? Yeah. Such as, if I ask you a question.

 **Rifat** ⌚ 01:45:31:17 - 01:45:35:19

I will say slash me. Use the quadrant.

 **Rifat** ⌚ 01:45:37:05 - 01:45:41:05

And find me all the Turkish people.

 **Rifat** ⌚ 01:45:42:08 - 01:45:46:04

And add them to every port.

 **Rifat** ⌚ 01:45:48:17 - 01:45:52:00

And place it to archive.

 **Rifat** ⌚ 01:45:53:05 - 01:46:09:08

So you understand the question. So what it's going to do, it is, it's going to use the line chain. Do a dig and there's also a security tunnel between me and the quadrant. And it is going to open up this quadrant database. Here's my quadrant database.

 **Rifat** ⌚ 01:46:10:20 - 01:46:15:28

Here. It's going to, this machine is off right now. You see, it's not clear, right?

 **Rifat** ⌚ 01:46:17:08 - 01:46:29:16

One gigabyte machine. I have around 120 machines. This will come online. And it's going to give the answer from there. But that database has a graph. Do you see the graph rack?

 **Rifat** ⌚ 01:46:31:01 - 01:46:31:27

Do you see it?

 **Rifat** ⌚ 01:46:33:08 - 01:46:46:02

Graph rack. There is a quadrant network. So all of this is already set. This is going to turn this on. Get all the Turkish people. This is a very hard query that I'm asking.

 **Rifat** ⌚ 01:46:47:07 - 01:47:30:04

When I say all the Turkish people, I'm not writing select star from Turkish. No. I just said the Turkish people. It will scan 100,000 documents. And it will find all the Turkish. I could say all the mail, all the Jimbombo. Jimbombo means people who belong to the Galatasaray team. It will find the Galatasaray. It will find the people who are supporting that team very easily from quadrant. But it is going to force that system to turn on and give me the answer around it, which it does right now. Let me share my screen one more time.

 **Rifat** ⌚ 01:47:31:23 - 01:47:32:22

There is my screen.

 **Rifat** ⌚ 01:47:34:25 - 01:47:35:01

Here.

 **Rifat** ⌚ 01:47:36:28 - 01:47:39:15

Share the screen. And I have multiple...

 **Bora** ⌚ 01:47:39:15 - 01:48:02:26

All the chat sessions, right? Using a lot of tools like Gemini, Glo and chat GPT. And in the sessions, whatever you write down goes to a file. And then you scan all that file and then it populates in the second brain. Is it the workflow?

 **Rifat** ⌚ 01:48:02:26 - 01:48:11:16

Yes. Everything I put the data sources, it's a bit big. Messages 240 characters.

 **Rifat** ⌚ 01:48:12:20 - 01:48:22:24

Can't I send big messages on here? It says the messages are a bit big. I will try to send a screenshot because there's like...

 **Rifat** ⌚ 01:48:24:02 - 01:48:29:11

It doesn't let me send a screenshot. But it does... I will show it on the screen.

 **Rifat** ⌚ 01:48:30:13 - 01:49:01:04

It doesn't let big screenshots. As you guys see here, it goes to a tunnel. It goes to a quadrant. It goes to a Neo4j. EDB Postgres in the background. It says my system is down, meaning the network connection is down. I need to open up a network connection on the system. It does normally open it up. When I normally start my work during the day. Why doesn't it open up?

 **Rifat** ⌚ 01:49:05:00 - 01:49:12:02

I couldn't copy paste this. Probably this is because this is too small. Turn the world.

 **Rifat** ⌚ 01:49:16:17 - 01:49:22:19

I make it bigger because this thing has cut the screen.

 **Rifat** ⌚ 01:49:24:00 - 01:49:34:04

And there is also a network between me and between the fly. So all my data is what's it called?

 **Rifat** ⌚ 01:49:36:13 - 01:49:40:10

Already secure as well. For some reason, it's not opening up.

 **Rifat** ⌚ 01:49:41:21 - 01:49:46:10

I will give the error to here so it should be able to fix the error.

 **Sude** ⌚ 01:49:47:18 - 01:49:52:12

What about how much storage area does it need to take for your computer?

 **Rifat** ⌚ 01:49:52:12 - 01:50:38:16

Only 100 GB just on the files. I'm not talking about quadrant. I'm not talking about Neo4j. I'm not talking about Google Drive. So it is my data store always gets bigger and bigger and bigger every single day. So even this query right now that we are sending it will automatically create the storage. Let's look at the archive for your info. So tell me one day, like let's go to second month, 2026. Can you guys see? Let's go to second day. I don't care. Do you guys see there is lots of data?

 **Sude** ⌚ 01:50:40:10 - 01:50:40:16

Yes.

 **Rifat** ⌚ 01:50:43:13 - 01:50:56:27

So every chat, everything that I talk about, this is not only Bora, only business information. I can go to the second brain and say, do me an ILR application.

 **Rifat** ⌚ 01:50:58:05 - 01:51:06:02

Indefinitely to remain application for the UK. It will do the ILR application and it will do a correct application.

 **Rifat** ⌚ 01:51:07:19 - 01:51:42:19

And this is not different than set me up. I am server identity management server because in my second brain, the personal and the business knowledge is always on the same. This conversation right now we are having is also in the second brain Bora that we are having because there is a transcript of here. The transcript goes to the archive and the archive gets pushed by a system called our clone. What I do it is this. Let me show you

 **Marianna** ⌚ 01:51:42:19 - 01:51:45:07

how many system I use in course,

 **Rifat** ⌚ 01:51:45:07 - 01:51:50:22

lots of systems. I'm using a lot of systems. Let me show it.

 **Rifat** ⌚ 01:51:52:05 - 01:52:01:20

So this is what I do while this is working. I call this pap. It's called pull push archive.

 **Rifat** ⌚ 01:52:03:13 - 01:52:04:12

I will make it bigger.

 **Rifat** ⌚ 01:52:05:17 - 01:52:06:10

Can you guys see?

 **Rifat** ⌚ 01:52:07:25 - 01:52:34:15

Pull push archive. So what does it do? It is it pulls the data from the sources. It pushes my data and it starts archiving. Did you guys see it directly entered the code. It didn't try to find it. It already knows where it is because I have run this pull push archive multiple times a day, multiple years.

 **Rifat** ⌚ 01:52:36:01 - 01:53:25:10

So that is why the archive is also very, very important and archive. Everything ends up in the archive. What do I mean? Such as I start a project, a new project. I want to start betting on Polymarket this month. This is a project with a timeline. Then I say I will do scalping. Let's give it to an agent. It becomes an area. Then I have these accounts, account details, open up positions, resources. Then I say I'm not doing this anymore. Then it all ends up in archive. But tomorrow if I ask you a question, what did I do with Bora? It will bring everything to me. What's my relationship with Mariana? It will bring everything all together because it has all the bits and details.

 **Rifat** ⌚ 01:53:26:18 - 01:53:27:23

So that is the reason.

 **Bora** ⌚ 01:53:27:23 - 01:53:45:25

Are you saying that without all those sophisticated statistics, that you are using the systems, using the obstacles?

 **Bora** ⌚ 01:53:47:07 - 01:53:58:04

Is it correct? Because you get to the population manually, so you have to do with the systems that you are using.

 **Rifat** ⌚ 01:53:58:04 - 01:54:13:04

R-Colon, I cannot use Git. Two years ago I was using Git. But once you pass 20 gigabytes and 20,000 files, the problem is Git is creating a compression.

 **Rifat** ⌚ 01:54:15:10 - 01:54:58:05

And Git up says, or Git air says, I don't let you push 10 gigabytes, zip files, to my system. So my system is not transactional. My system uses R-Colon to push the data to Neo4j, to push the data to EDB, to push the data to Google Drive. So my system always comes from behind. But because I have lots of alternatives and a length chain and a length graph in the front, it does give me a better answer. Such as if you ask your AI, who is my family, AI doesn't know who your family is, right?

 **Rifat** ⌚ 01:54:59:10 - 01:55:26:04

Because you are only on the business information, no personal information. Mine is able to give it. But mine will also be able to say, I bought Aiza and I bought stocks for Aria, my daughter. Directly in that question is also my business and personal comes together, and that comes together over the archive. So to answer your question, yes, I will record everything.

 **Marianna** ⌚ 01:55:28:14 - 01:55:30:24

But do you understand correctly?

 **Marianna** ⌚ 01:55:33:25 - 01:55:37:04

Bora, you go. I will ask later, sorry.

 **Bora** ⌚ 01:55:41:04 - 01:55:43:27

It's okay. I mean, my problem is that

Bora ⌚ 01:55:45:20 - 01:56:25:03

I'm having a hard time to find chat sessions. I asked something some time ago, but I know there is a chat session, but I cannot find it. So if there is a way to, you know, easy way to populate all those chat sessions into the second brain, I can easily find the right chat session that I did before. That was my problem. But what I see is that the system you are using is very complicated.

Rifat ⌚ 01:56:26:04 - 01:56:32:27

Yes. Sude, you did that, right? You took all your chats and put it to the second brain, right?

Sude ⌚ 01:56:32:27 - 01:56:35:20

Not all of my chats, just pin chats.

Rifat ⌚ 01:56:35:20 - 01:56:51:03

Just the pin chats, not all of the chats. So in Claude, in Gemini, there is all the stuff. But don't forget, guys, I don't need to get all my chats because I automatically save my chats at day one.

Rifat ⌚ 01:56:52:04 - 01:57:12:23

I don't need to export import because I realized I'm getting dependent on AI. My bet is everybody is going to use AI like calculators. So I start the day with AI. I don't send my emails. I tell the AI to send emails. It automatically creates the archive.

Rifat ⌚ 01:57:14:23 - 01:57:21:19

Such as we send emails today, right, guys? We just send emails to these 10 people. Is that correct?

Rifat ⌚ 01:57:22:20 - 01:57:30:27

Right now, if we go and look at today's archive, we are going to see that there is all these people in the archive.

Rifat ⌚ 01:57:32:07 - 01:57:37:08

So this is doing the archive stuff. I will open up a new session.

Rifat ⌚ 01:57:38:14 - 01:57:42:03

What are the files in today's archive?

Rifat ⌚ 01:57:43:04 - 01:57:53:08

It will be able to find today's archive. Did you guys see it found the archive location directly? Did you guys see that?

Rifat ⌚ 01:57:55:22 - 01:58:01:13

Archive location directly. And all the contacts that I created are already in archive.

Rifat ⌚ 01:58:03:18 - 01:58:09:03

The school is in archive. So I started with the archive at day one.

 **Rifat** ⌚ 01:58:10:04 - 01:58:26:19

So that is why we are talking about Para. We are talking about second grade. Right now, you guys are like, okay, this is going to create complexity because once you guys are starting doing archive, there is more stuff that comes on.

 **Rifat** ⌚ 01:58:28:04 - 01:59:05:28

That needs to happen. Such as I will do you guys an example. Another example. I want to find all my receipts from August-July. I can come here and say create a document and give me the top five receipts from July 2026. This part is a semantic search. This part is a full-text search and embed them in a document.

 **Rifat** ⌚ 01:59:08:04 - 01:59:11:08

So there is four searches here.

 **Rifat** ⌚ 01:59:12:10 - 01:59:17:24

Semantic search, Google Drive search and a grep search. So what am I trying to demonstrate?

 **Rifat** ⌚ 01:59:19:04 - 01:59:51:08

Normally, once you guys are doing grep, retrieval, augmented generation, it is not only one search. There is a time search. Semantic search, meaningful search. That is important for me, these receipts. Why? Because I am a contractor. They ask me the receipts. I need to get their money back. So I have a system to be able to save those receipts. So it will give me all the receipts back over there. Let's see if it did give us the receipts.

 **Rifat** ⌚ 01:59:52:12 - 01:59:59:16

It is coming up on here. It is going to find it. And I will say open the doc in Obsidian.

 **Rifat** ⌚ 02:00:03:02 - 02:00:06:03

You guys see it's created a document in Obsidian.

 **Sude** ⌚ 02:00:07:04 - 02:00:13:24

And it automatically knows which section of the Obsidian it takes from Obsidian.

 **Rifat** ⌚ 02:00:13:24 - 02:00:30:03

Yes, I do not memorize this stuff. I don't memorize. This is a real brain. I do not memorize that stuff. But I also do my job applications with my second brain as well. I do all my life. I do my payments with Obsidian.

 **Rifat** ⌚ 02:00:31:04 - 02:00:35:02

Look, it is all right. So these are the invoices.

 **Rifat** ⌚ 02:00:37:25 - 02:00:39:04

It is all right. This one.

 **Rifat** ⌚ 02:00:40:11 - 02:00:41:13

These are the invoices.

 **Rifat** ⌚ 02:00:44:28 - 02:00:51:03

It has all the invoices. How many days I have heard it came because I am a contractor. I have to do this stuff.

 **Rifat** ⌚ 02:00:52:04 - 02:00:55:04

I don't have it. And it also created another report.

 **Rifat** ⌚ 02:00:56:06 - 02:01:02:12

I ask a question. Report creates another report. And it opens up the top five receipts.

 **Rifat** ⌚ 02:01:03:15 - 02:01:06:00

Document is on here. Why doesn't it open?

 **Rifat** ⌚ 02:01:09:12 - 02:01:13:16

Maybe I got so big on this. This is full screen mode.

 **Rifat** ⌚ 02:01:14:24 - 02:01:17:03

I am on the full screen mode on Obsidian.

 **Rifat** ⌚ 02:01:18:04 - 02:01:22:01

Go out. Maybe I need to escape.

 **Rifat** ⌚ 02:01:23:03 - 02:01:28:26

Yes, the top five. Top five receipts on here.

 **Rifat** ⌚ 02:01:30:15 - 02:01:38:01

Detailed breakdowns. There is like we created way too much data. Where did it come from? How did it come from? That kind of data is...

 **Rifat** ⌚ 02:01:39:04 - 02:01:41:09

No, my screen was not shared. Sorry.

 **Rifat** ⌚ 02:01:44:04 - 02:01:46:18

So it got all the data on here.

 **Rifat** ⌚ 02:01:48:16 - 02:02:18:00

And it got the inside of the data on here. Who I got the data. What is the taxes? The NI, the pension. All these stuff that comes on here. But as I said, I start doing my day with AI. So that is why I shared you guys with my recipe. I go and cook food. I use the AI to cook food. I will also show that as well. I showed it to Bora.

 **Rifat** ⌚ 02:02:19:19 - 02:02:26:11

All these projects that I do, I have like 444 projects.

 **Rifat** ⌚ 02:02:29:04 - 02:02:37:05

What was it? These are also in Obsidian as well.

 **Rifat** ⌚ 02:02:38:26 - 02:02:40:28

All the Turkish food recipes.

 **Rifat** ⌚ 02:02:46:19 - 02:02:55:02

So it is... Mine could be like right now that can look excessive to you. Think about me 30 years ago.

 **Rifat** ⌚ 02:02:56:04 - 02:03:02:24

Comes and tells Bora, I have this x86. Do you remember the x86 computers?

 **Bora** ⌚ 02:03:04:27 - 02:03:05:16

x86?

 **Rifat** ⌚ 02:03:05:16 - 02:03:06:24

Yes.

 **Bora** ⌚ 02:03:08:10 - 02:03:10:19

I am

 **Rifat** ⌚ 02:03:10:19 - 02:03:20:03

telling you, I am going to use x86 for my accounting, my xyz. Nobody will believe me. Right now everybody uses a mobile phone.

 **Rifat** ⌚ 02:03:21:04 - 02:03:46:24

Because all the banking, all the apps are here. Instead of using a mobile phone, what I am trying to use is this. I use the AI. AI does that, but Bora does the same. He opens up market positions. I open up all my positions. All the positions, because today it is my vision. And I am learning in that process as Zelda. Because when I send my accounts,

 **Rifat** ⌚ 02:03:47:27 - 02:03:58:16

my receipts to the agency, they realize this is created by the AI. And everything that does such as... I did a video today.

 **Rifat** ⌚ 02:03:59:20 - 02:04:05:13

I also did that with AI on YouTube. And to end.

 **Rifat** ⌚ 02:04:06:14 - 02:04:26:09

So I am trying to go to that kind of a route on here, on the channel. This last video. Did I publish it? This one. This one is on the mobile AI. I did mute it. I will not be able to make these animations if there was no AI.

 **Marianna** ⌚ 02:04:29:24 - 02:04:32:01

You are not sharing screen. Oh, you are sharing.

 **Rifat** ⌚ 02:04:32:01 - 02:04:33:01

I didn't see.

 **Marianna** ⌚ 02:04:34:09 - 02:04:37:25

I have seen your video today. I even put a line.

 **Rifat** ⌚ 02:04:39:04 - 02:04:41:05

No, I am not sharing. Sorry, I am not sharing.

 **Rifat** ⌚ 02:04:42:20 - 02:04:47:23

The video is here. So this video is all AI as well.

 **Rifat** ⌚ 02:04:50:11 - 02:05:33:03

So I cannot do these animations myself. I use the Google flow to be able to create this animation and do the animation. But is it easy? No. Is it complex? Yes. But it is what I see though. I completely agree with Bora. We need to focus on the strategy part. But for me to focus on the strategy part, I also do all these bits and details. Because you guys see how fast I am running them, right? When I saw my archive, it gave the archive. I said, give me the expenses. It gave me the expenses. Such as once through the host, even though you have a very small... I want your system.

 **Rifat** ⌚ 02:05:34:10 - 02:05:56:02

But you can have that system. If every day you work on it, you will start making that system. Bora's Hermes is much better at opening up market positions than my system. My system right now cannot open up market positions because it is not an expert on opening up market positions.

 **Sude** ⌚ 02:05:56:02 - 02:06:05:17

But it is important that how you are starting at the beginning, how you are building the system, the architecture at the beginning.

 **Rifat** ⌚ 02:06:06:17 - 02:06:13:16

But don't complicate your system. Do you think Mariana, should you guys complicate that to start?

 **Rifat** ⌚ 02:06:16:01 - 02:06:23:04

I don't think so as well. Don't complicate. Otherwise you will get them motivated, right Bora? I don't think so.

 **Marianna** ⌚ 02:06:23:04 - 02:06:29:20

You know what? It's so nice to hear about it, but it's so difficult to do it on your own.

 **Rifat** ⌚ 02:06:29:20 - 02:06:41:03

Yes. So what do you guys think about this format though? We did less lecture, more like a party style. Do you guys think this is better or we should go back to the previous format?

 **Marianna** ⌚ 02:06:42:04 - 02:06:45:02

Now I have got a good appetite

 **Marianna** ⌚ 02:06:46:03 - 02:07:21:14

to manage obsidian better. And I would ask the first moment, can you tell us more in details about all databases that you mentioned today that you are using? Because I think that we have to open it just to work with it a little bit, to connect it and to integrate, to configure as well as to do something with obsidian. Because we are talking it's great, but when we can practice it on our real projects, it will be better.

 **Rifat** ⌚ 02:07:21:14 - 02:07:35:03

We can do it in the next section, the Lang chain and the Lang graph and push Bora's intentions to Google Drive. Because Google Drive is the cheapest one.

 **Marianna** ⌚ 02:07:35:03 - 02:07:36:03

Yes, exactly.

 **Rifat** ⌚ 02:07:36:03 - 02:07:45:14

I have data on Google Drive. And it gives the data. Google is the cheapest. We have Google, right Bora?

 **Rifat** ⌚ 02:07:46:14 - 02:08:03:14

I will contact. Yes. Google Drive. So you can push the stuff to Google Drive. You don't always have to do the quadrant in the beginning. Start with Google Drive and the Google Drive gives best of the both worlds in the beginning.

 **Rifat** ⌚ 02:08:04:14 - 02:08:27:14

But then you guys will start saying, find me all the Turkish people, put it to a document. Then a quadrant makes sense. Then you ask a more complex question. Create me a position in energy sector and short all the airlines at the same time. Then you need a Neo4j, more complex relational stuff.

 **Marianna** ⌚ 02:08:28:18 - 02:08:30:27

May I ask something? Because of

 **Marianna** ⌚ 02:08:33:02 - 02:08:39:11

all these databases that you configured and you connected.

 **Marianna** ⌚ 02:08:41:04 - 02:08:47:18

Is this because of that? You spent so small amount of tokens?

 **Rifat** ⌚ 02:08:48:29 - 02:08:52:14

Yes. And there is Lang chain and Lang graph in between.

 **Rifat** ⌚ 02:08:53:14 - 02:09:02:14

I did not set them up in one day. My goal is I want to work. I want computer to do the work.

 **Marianna** ⌚ 02:09:02:14 - 02:09:11:13

Yes, but it means that in that way you are saving lots of energy and time and money.

 **Rifat** ⌚ 02:09:12:14 - 02:09:29:14

No, I am spending 25 pounds to fly I.O. because EDB has a cost. Neo4j has a cost. Quadrant has a cost. Google Drive has a cost. All of them have a cost.

 **Marianna** ⌚ 02:09:31:15 - 02:09:41:02

But still it is cheaper than you might spend if you don't have all of them.

 **Rifat** ⌚ 02:09:41:02 - 02:09:48:13

Yes, because for me to create my receipts is important. For me to create 40 pages.

 **Marianna** ⌚ 02:09:49:14 - 02:09:58:05

And then you are not dependent. You are creating your own world. You are not dependent on others with managing your data.

 **Rifat** ⌚ 02:09:58:05 - 02:10:50:29

I am dependent on my Proxmox. My data is not on this laptop. I am also pushing it to another machine Proxmox. I am pushing it to Google Drive. That pull push archive process takes time in the background because ArcLone such as how I started two years ago, three years ago. I started putting files in a one Google Drive folder. Then my system started getting locked up all the time. You can't do that. Then I said, okay, I need to use ArcLone to be able to do this. So don't try to do it in day one, but you guys are going to... No, we cannot. ... going to realize you need to do them slowly by slowly such as how are you doing the image search? You guys take lots of pictures. How are you guys doing the image search?

 **Marianna** ⌚ 02:10:53:08 - 02:10:54:05

In my folder.

 **Rifat** ⌚ 02:10:55:08 - 02:11:04:13

No, with the AI. How are you doing it with the second brain? Can you remind me a key picture? In your second brain is a question.

 **Rifat** ⌚ 02:11:05:14 - 02:11:40:02

I don't do it. I should do it. I can ask, find me all the cats. It will find all the cats because I have already Google Drive assigned it. And I know what the Google Drive image recognition can do. Because that's only their service that they are giving them. I will do... Let's finish up. But I will be one simple example for you guys. In Google Drive, such as there is... I have these security clearance documents. As an example, I have the Overbill. You guys see the Overbill right in front of you? Mm-hmm.

 **Rifat** ⌚ 02:11:41:04 - 02:11:55:13

Such as if there is the account number in the Overbill. If I'm not in that folder, if I search that, the full-text search will bring that Overbill directly. This is AI using the Google Drive very well.

 **Rifat** ⌚ 02:11:56:14 - 02:12:13:13

So, I am ahead of you guys because once I write that number, because the Google Drive brings it, my context, my brain is already set up better than you guys. I will hallucinate much less because it goes to Google Drive.

 **Rifat** ⌚ 02:12:14:14 - 02:12:32:13

And what I do is, I take the Google Drive and I go to Neo4j. I get all the relationships because over is related to Peter's field. Peter's field is related to my costs. These are all coming up. I am not overloading the context all the time.

 **Rifat** ⌚ 02:12:33:14 - 02:13:05:13

I cannot, because I cannot put 100 GB. I need to select a small set, but a smart set. So, that is what we are doing. But what Mariana said is very good. I'm taking everybody's time in this party way too much. Next time we talk about the databases and we go into pushing these databases in a smarter way. The reason I am saving them on the archive is, I want my local computer to be fast as well.

 **Rifat** ⌚ 02:13:06:14 - 02:13:31:13

Don't forget because sometimes you cannot reach the Google Drive. You cannot reach Quadrant. You cannot go to the fly. I can still do the grep, grep meaning Windows or Linux file search and be able to get the result out. That's also a backup for me. My local computer is still a backup solution.

 **Sude** ⌚ 02:13:32:14 - 02:13:49:13

One last question. If we don't want to give access permission for all of our Google Drive documents and just the specific documents we want to give them permission access, what do we need to do?

 **Rifat** ⌚ 02:13:49:13 - 02:14:35:04

I put them into a shared drive. In Google, there is a feature called Shared Drive. You can put the information to only a shared drive. But in my case, I put all the data. I have right now 100 GB of data. In my Google Drive, there is 5 TB of data. 5 TB, like 50 times more. Much more. That data. My plan in the future is bring all of that data here so I can write the AI. Find me the video footage where I talk to Bora, Mariana and Sudhe. Give me that 20 second clip. It should be able to find the file. Give me a 20 second clip very easily. But your

 **Sude** ⌚ 02:14:35:04 - 02:14:39:10

AI agent has only a permission on your shared drive.

 **Rifat** ⌚ 02:14:39:10 - 02:15:09:07

Only shared drive. But in the future, I will make that shared drive, that 5 TB drive so it will be able to get everything. And this is why these AI companies you guys here on the news are spending trillion dollars. I am on the edge of the ship. I can see it with depth. I am putting all the data there. Like after a while, you guys will realize everybody is carrying a phone. Everybody is connected to AI. Everybody is putting all the data to AI.

 **Rifat** ⌚ 02:15:11:05 - 02:15:13:10

So that is where we will go.

 **Rifat** ⌚ 02:15:14:11 - 02:15:22:13

Anyway, I hope I'm not trying to turn it into a lecture. We are starting a lecture format. Let's go back.

 **Marianna** ⌚ 02:15:22:13 - 02:15:26:07

Let's do next time. Let's do the data.

 **Rifat** ⌚ 02:15:26:07 - 02:16:02:11

Next time we meet in London, Bora on Triton Square on September. If you guys want to come in and join, come in and join on the Triton Square. That's very good place to hang out. We go to Antropic headquarters. Clothes headquarters in Triton Square. You will be able to be in a community where you will be able to learn a lot. And you might be able to get even free credits from them as well. They give free 200 pound accounts.

 **Rifat** ⌚ 02:16:03:19 - 02:16:04:13

Mariana, you might...

 **Marianna** ⌚ 02:16:04:13 - 02:16:06:09

I should go.

 **Rifat** ⌚ 02:16:07:24 - 02:16:07:28

What?

 **Marianna** ⌚ 02:16:07:28 - 02:16:09:13

I would go there.

 **Rifat** ⌚ 02:16:10:14 - 02:16:16:19

Every Thursday in September, you are going to come to the one in Cambridge, right in the Glass House.

 **Marianna** ⌚ 02:16:18:25 - 02:16:22:13

Yeah, when it's happening. I think it is... It seems that I'm missing some...

 **Rifat** ⌚ 02:16:22:13 - 02:16:35:09

Second or the third week. It's called the Venture Cafe. I will put the link to the chat for the people who are interested in coming up. And if you come to London,

 **Rifat** ⌚ 02:16:36:11 - 02:16:51:26

Sude, consider joining us. I put the link over there, Venture Cafe London. They also have Cambridge events as well. Venture Cafe Cambridge. You can look into that as well. We meet there. There is pizza, there is drinks.

 **Rifat** ⌚ 02:16:53:11 - 02:16:55:19

And you guys are able to meet up there.

 **Sude** ⌚ 02:16:57:19 - 02:17:02:01

I wish I could join you, but I'm in Ireland, so...

 **Rifat** ⌚ 02:17:03:07 - 02:17:05:10

You need to do more visa applications.

 **Sude** ⌚ 02:17:05:10 - 02:17:06:01

Yeah.

 **Rifat** ⌚ 02:17:06:01 - 02:17:16:01

But don't forget, people who get the visas for Ireland can go to the UK, and the UK people can go to Ireland.

 **Sude** ⌚ 02:17:17:10 - 02:17:17:20

Yeah.

 **Rifat** ⌚ 02:17:18:22 - 02:17:33:25

Try to learn. Use AI to learn, I guess. That's what's happening. We plan to go to Ireland. We are planning to go to Ireland. Alright, thank you very much, everyone, for joining. Thank you. And I hope you guys later. Thank you, Bora, for coming in.

 **Sude** ⌚ 02:17:33:25 - 02:17:35:07

Bye-bye. Thank you.

 **Rifat** ⌚ 02:17:35:07 - 02:17:35:13

Good night.

 **Sude** ⌚ 02:17:35:13 - 02:17:36:16

Bye-bye.

 **Rifat** ⌚ 02:17:36:16 - 02:17:37:20

Take care, bye-bye.

 **Bora** ⌚ 02:17:37:20 - 02:17:38:00

Bye.
