

Meeting Transcript

Rifat Erdem (Host): Hello.

Rifat Erdem: I can't hear you Mariana, but yes.

Rifat Erdem: Is it me?

Rifat Erdem: No, I'm not muted. It is on your end. It says it's muted.

Rifat Erdem: All right, we are going to rejoin. I can't hear, but I can feel.

Rifat Erdem: Okay.

Rifat Erdem: All right, I can hear you now, Mariana.

Rifat Erdem: Yes, you can see me. I see that we don't have too many people, but we didn't do nothing related. Oh, we did. I didn't know. I didn't know.

Rifat Erdem: I did a lot, though. I did a lot.

Rifat Erdem: And the things started working. This is a very good day, even though nobody joined.

Rifat Erdem: This is a very good day because the animations are working, Mariana.

Rifat Erdem: We got extra subscribers.

Rifat Erdem: It is 30 times more. I released after we met, I released two more, one on the core message and one on the other one. One of them got 150. This one will even get more than the 150. I can show it to you. And I created all the steps for you to be able to go through. But what you said was very, very important. You said it is easy for me or I think it is easy, but it is nothing to explain it. But there's 100 steps there, but it is working, though. It is really working, though. I moved myself out. Did you see the last short that I sent it to you today?

Mariana: I think, yes, I think that I watched it. Let's see it again.

Mariana: By the way, really very nice videos. Really great. And you know all these connections. The last video has lots of connections.

Rifat Erdem: Yes.

Rifat Erdem: A lot from you and from Ilhar talking to. And what he said interesting was he said focus on the message. I think that message, because I was watching Gary Stevenson, he is very, very passionate on the UK tax law, UK, the things that are changing. And I reverse engineered the video that I showed you. The first one was about they were all bad mounting the AI. And the second one that I did was is mostly about the message, the core message that the people are going to get. And where I am right now is I'm trying to reset up this studio again.

Rifat Erdem: I will invite more people on LinkedIn every week to these calls, to these calls.

Mariana: Yeah, it's okay. I would like to interrupt you because currently you've started to experience it. But currently the main are you recording? I need it. Okay. They're currently the main problem. Your main op not it's not a problem. It's like, you know, it's like

Mariana: It's it's good. It's amazing that you've got to that level. That's why you have something to tell people. But the main your main obstacle is to complexity. Go to the simplicity. Be as simple as possible. This is your task. You have to do it. Remember, put a big paper on a wall. Be simple. Be very for you. It's to be and I'm repeating it and repeating and I see that it works as a little bit simpler. You are it goes better. People view you if you are increasing people are adding again. Adam do simple things. And I would like to tell you take the piece of paper. Write down structure your own thoughts because what you are saying

Mariana: is very interesting and very important. When you are proceeding it through the A.I.

Mariana: It becomes different. It goes in a different at it becomes more. Oh, we have one more guy. Oh, TD.

Mariana: The main guy is here.

Mariana: Oh, you have fever.

Rifat Erdem: No, he gave me the feedback. I'm also going to church between seven and nine. He is going to church after 9 p.m. So he said, let's do this early. And you said, let's do this early. And tomorrow is the day that we are going to start with Chidi. Chidi told me on September past the cloth certification exam and we are going to do the faceless shorts. He started doing the faceless shorts and the faceless shorts started working. I always start to press the buttons a bit early than Chidi. We can't hear you, Chidi. You're you're on mute.

Rifat Erdem: You are still on mute. You are consciously on mute or unconsciously.

Chidi: I've been telling you about this for ages.

Rifat Erdem: Yes. What are you telling? Repeat Chidi. Repeat what you are telling.

Chidi: So for quite a while now, I was saying that I'm not in the mood to go in front of any cameras and all of that. And it's like, no, no, no, no. Then all of a sudden, oh, Chidi, this faceless thing could be working. But

Chidi: sadly, it's too late.

Chidi: Because from the 1st of January,

Chidi: well, it's not too late. We have if you're going to do it, you have to do it before the end of the year, because apparently Facebook have changed their algorithms for monetization.

Chidi: So before it used to be, I think, 4000 watch hours. Now it's going to 8000 watch hours.

Chidi: So if you're going to set up a channel, you need to get to 8000 watch hours so you can get monetized. Otherwise, from January, it's going to go to 8000 watch hours. That's what I saw in the clip.

Rifat Erdem: Yes, Chidi has seen the process that I had done. I know Chidi more than

Rifat Erdem: three, four years. And he has been through the process of me creating the videos. The videos that I first created were taking me around the week. The last video that I created took me around no more than two hours to create. And it got two hours. How many tokens?

Rifat Erdem: Most retention.

Rifat Erdem: I'm using Google flow. So I'm using around 100 million tokens to be able to create the video.

Chidi: But how much money? How much money? Tokens? Yes. But how much money?

Rifat Erdem: It is around twenty dollars a month. I'm able to create.

Chidi: No, no, no, no, no. How much? What's the cost per video?

Rifat Erdem: Two, two pounds. Two pounds per video.

Chidi: And you're going to do how many videos a day?

Rifat Erdem: Right now I'm going to I'm planning to release a video a day that is the future goal. But right now if I can land in terms 30, that's 60 pounds.

Rifat Erdem: No, I'm kept at 20 pounds a month. So I'm only using one Gemini subscription, which is 20 pounds. And I'm only able to make time videos. We did.

Chidi: And how many of you have you been getting less about to do the math?

Rifat Erdem: I can share my screen if you guys are interested.

Rifat Erdem: The views right now skyrocketed. So compared to the previous ones, I guess the cheat is connection that lost. But what we were talking with Mariana, which is creating these

faceless videos and being able to monetize. He's into all the comics, creating storyboards, using videos. He we worked with him together in Goldman Sachs, this big finance company. And he is also into AWS and all these bits and pieces. He also had the channel where he recorded himself in London Excel. Maria also worked in London Excel with one of my friends. So

Rifat Erdem: Chidi created something similar. So Chidi, can you hear us now? I'm just getting.

Chidi: Yes.

Chidi: No, it's not.

Rifat Erdem: Now it's not cutting. So Chidi, right now the views skyrocketed compared to the past. We are getting five times the retention, meaning people are watching 50 percent of the video, previous videos. They were only watching 10 percent.

Rifat Erdem: Right now the videos are getting five times more views. So my past videos, I have to make at least 25 of them to be able to do one of these new ones.

Chidi: Sounds very expensive.

Rifat Erdem: No, no. The cost is stable.

Mariana: No, he is talking not about cost. Adam is talking right now about views, that he is getting more views, five times more views.

Chidi: So how many views have you got in total? What's your total watch hours?

Rifat Erdem: My total, I can't share this.

Chidi: It's not even views, Mariana. The problem is, it's not the views, it's the watch hours. Whether you get 1000 subscribers or 4000 hours watch

Chidi: time before the end of the year. So getting views is because somebody can click on it and click away, but it's the view.

Mariana: Yes, but Chidi,

Mariana: the

Mariana: Adam main goal is to get students for a cloud certification course.

Chidi: Ah, so you're not interested in monetization.

Mariana: He is not, his main goal is not monetizing YouTube channel.

Chidi: Ah, I see.

Mariana: He is getting more views than he is getting more potential clients. And he really, how many people did you get from that? Because you are getting more followers from this one minute real short. He is getting more followers.

Chidi: How many followers have you got now?

Rifat Erdem: But it's just two or three things.

Chidi: No, how many people have joined the school?

Rifat Erdem: There is 30 people joined the school. The school is the only platform that we voted. He just started. And we started to get engagement. I was his first student.

Rifat Erdem: Yes, Chidi is the first student.

Rifat Erdem: So Chidi, what happened with the school is, I got conversations into 100 plus conversations. I was unable to get the conversations on YouTube. This is the reality because on YouTube you publish the content, but you don't get any interaction. On school, I started to get interaction with the people. Right now, we started to get views and retention. People are watching till the end of the video and they are clicking and coming to the school.

Chidi: So the objective is to use the shorts to get more students into the school.

Rifat Erdem: Yes, use the shorts to get more subscribers, which leads into more people watching YouTube, which leads into people landing into school. They come to these one-to-ones. So we start to create a community. We don't lecture people here on these courts. We just talk what they did that week, what they are using in terms of AI. I show them what I do. Mariana shows what she does. You show what you do. We collaborate a little on from each other. This is like a dance. I'm trying to be a DJ, but anybody can take the DJ seat. We all dance. This is the main thing. I'm trying to dance. This is the main thing that I'm doing. With this beard, I don't know how I'm dancing.

Chidi: Listen, your beard is legendary. I like your beard.

Chidi: Your hair grows much faster than mine.

Rifat Erdem: Yes, the beard is because of Mariana. Mariana showed more than a million dollars worth of training in Ukraine in her last 10 years. The Coursera gives 10,000 pounds for these courses with this Indian company Starweaver combined. There is 10,000 pounds of institutional value. The plan is right now put around four courses, all focused on AI certification,

Rifat Erdem: and hit the market with 40,000, and return that money back as 10,000 pounds from the audience that we can validate. Yes, people are interested in this message. Artificial intelligence increases the skills expectations. The way to go out of this is create a self-learning, get certified on AI, and enter into this community. That is the core message that we are trying to turn it out.

Chidi: I've got a couple of questions.

Rifat Erdem: Yes.

Chidi: The question for me now is, you do all this. What's the aim? Is the aim to build a community and teach them how to make money with AI, or build a community and get people to be able to

Chidi: be employable in the marketplace? What's

Chidi: the end goal?

Rifat Erdem: Two days ago, me, Mariana, and Ilkhar. Ilkhar is a guy who worked in Google for 10 years to build communities for YouTube and Google. He said, "This business, I did not know this term. I learned it two days ago from Mariana, from Ilkhar." He said, "This is not a B2C business. This is B2C to B business. I did not know this concept, B2C to B, meaning people come in here, they understand the importance of certification, they create a community, then we use those killers, we use those delivery pilots. People become like chides. They become independent contractors, then we position them to the big enterprises like AstraZeneca. The big enterprises these clubs provide them are using as contractors, as independent contractors, and convert them from C to B.

Chidi: Slow down, slow down, slow down, Rifat. You know how fast you go. You're a Ferrari, I'm just a golf.

Mariana: Yeah, and I'm telling that. I'm telling that all the time.

Chidi: You're dropping names of AstraZeneca. When were we out in the mud? I had to slow him down because after five minutes the clients would just be like,

Chidi: "You know when you drink water from the fire hose, they'll just be overwhelmed." They're like, "Slow down, what he means is this. Wait, Rifat, what he means is this."

Chidi: My question now is, you're saying AstraZeneca. Who's getting the contact into AstraZeneca for the placement? There has to be somebody who's going to reach out to the

people to get the spaces, to get the budget, to get the thing, and then you present. So what you're saying in the midst of that speed was there has to be a recruitment or a person who goes and gets the contacts, "Oh, we can get you this." How is that going to happen?

Rifat Erdem: That is the keyword that's called Chidi. Chidi takes this community and takes the people who are certified. Yes, Chidi. Chidi takes the people who are certified, who are killers. Ghost AstraZeneca. AstraZeneca is spending two million pounds a month to clot. They need certified people to be able to get the money.

Chidi: So let's roleplay this. Let's walk this through step by step. Let's do the value stream. So along comes Chidi.

Chidi: And I have 10 killers behind me.

Chidi: And then I go to AstraZeneca where? AstraZeneca who? AstraZeneca how?

Rifat Erdem: Yes, you go to the AstraZeneca's department of IT.

Chidi: So I call

Chidi: them...

Rifat Erdem: They are already the top spenders of clot in United Kingdom.

Chidi: I

Chidi: understand that, but you need a contact person. I have worked for like GSK and all of those. First of all, who is the purchasing person? You have to be on their books. They have to agree they want to get you. Who is the recruiting manager? How do we get past those hoops? Because

Chidi: every time I've recruited people, I have a budget. Oh, new project. I have a budget. I have a budget code. I go out to my recruiting people who are either on my books or I have a relationship with. I say, this is what I'm looking for. And then they give them to me. So if we want to be that person on the other side, step me through how you think the process is going to be. Are we going to cold email them? Are we going to call them? How do we get the contacts? How do we know who?

Rifat Erdem: See, they are... We are going to get the contacts directly from Cap Gemini. I will explain Cap Gemini, IBM, C Prime. How these companies are right now, my own company and IBM and a couple of them. What are they doing? They are paying people to get these certifications. And they want cloth certified people. And what they are doing right now is not only paying the certifications. They are paying the people who take the certifications extra bonuses. So there is more certification.

Rifat Erdem: Right now in the market...

Chidi: Those are FTE employees already. It's not from outside.

Rifat Erdem: No. This is the reality, Chidi. I did take this on the customer interviews. Most of the time, these talent is not existing in the marketplace right now. They are paying it. I'm a contractor with the Cap Gemini. They even paid me as well. Because there are not that many people.

Chidi: So how come it's not on the job boards? I'm not being pessimistic. I just want you to talk me through the logical steps. Because this is super high level. But when you go one abstraction down, the actual things that need to be done to get there. So you are saying there is a lookout for talent. And none of the job boards have I seen people who are looking for that talent where they are calling out these certifications.

Rifat Erdem: Yes. They call that

Rifat Erdem: forward deployed engineers. If DevOps is like this, right now the forward deployed engineer is like this. Forward deployed engineer, FTE, are the people who use the AI and bring the value to the enterprise. They are right now skyrocketing. Our company spend 10 million plus pounds to volunteer to bring in these forward deployed engineers.

Chidi: But how do we get into that action?

Chidi: How do we get to that action?

Chidi: What's it called?

Rifat Erdem: I don't know. First of all, what I know is AstraZeneca is spending this money. Capgemina is paying the money to recruit these people. And we are in between. We are going to get this community. We have all these certified people in our disposal. We can move it with C prime, with IBM, with Capgemina and we can lend AstraZeneca.

Chidi: Let's just choose one. You've called three. So let's just use C prime.

Chidi: Walk me through how that works.

Rifat Erdem: So on the C prime, what you are saying is you have 10 people that are already certified.

Rifat Erdem: Once we go there, right now one of the main problems with the partners...

Chidi: Slow down, slow down. Go there to...

Rifat Erdem: To tell them we can get them 10...

Chidi: Who in C prime?

Rifat Erdem: On C prime, who is going to do the business development? I guess we are only going to go to the people who are doing the business development. That's why I said you.

Rifat Erdem: So the business development team has a card which they have 10 certified people.

Chidi: I have to tell you from first-hand knowledge that those C prime people, they couldn't close the front door.

Rifat Erdem: What do you mean?

Chidi: Their sales department is terrible. They can't even get business for themselves.

Chidi: They are scrimping and scraping. Every time I ask, is there any new business? No. Is there any new business? No. They have had the sales function forever. They are constantly letting people go. The team that was huge, I mean, I was in a couple of days ago.

Chidi: They are like barely trying to get this client.

Chidi: Those days of, oh, there are loads of clients and they are looking for extra people. Even the people they have. The reality is there is a lot of noise. From what I'm hearing going on about AI, they are making all these noise. We keep hearing these numbers being flowed around. How do you get into that pipeline?

Chidi: C prime is not

Chidi: one of them. They are struggling to get the money. Why would they give it to us?

Chidi: How do you see that happening?

Rifat Erdem: My thought process is, you are saying, we have Mariana, Rufat. We have 10 people. It is certified. Once they are able to bypass the Entropic's partner classification, having 10 certified people, the Entropic forwards them, the customer of the AstraZeneca. That is the premise of the Entropic forwarding them, this customer. I also enrolled into that place as well. You are adding 10 certified people into the portal.

Rifat Erdem: Entropic says, I have 10 customers in the UK who is spending a million dollars a month.

Chidi: Sorry, Mariana. I have a million and one questions. Please, please, please indulge me. When you become an Entropic customer, does it have different grades? Gold, Silver, Platinum and all of that?

Rifat Erdem: Yes.

Chidi: Right. My experience.

Chidi: You remember when I did the AWS or whatever, I was one of the first 100 globally to have all five of the certifications. I was teamed up with somebody and we became a partner. We went to the partner events. However,

Chidi: bronze or whatever the lowest one is, the one where you have 10 and then you have the Cap Gemini. Those guys, anything that moves, oh, we can do that now. They just use the brute force and they take all the customers. All the good leads always go to the big partners. How do we get past all of that? Because everybody now, Gold Rush is becoming a partner. How do we get past the noise?

Chidi: Yes. Entropic has 10 leads, 20 leads, 30 leads. How do we ensure that we get from the other 100? Because we're competing now.

Rifat Erdem: Yes. I completely agree with you. This is the reason I'm going to Entropic headquarters every week.

Rifat Erdem: Every single league, I'm going to Entropic headquarters. My thought process is you are completely right. We cannot bypass these C-Prime Cap Gemini's IBM, but we can play into them. We can go to them. You guys suck at sales. You guys cannot close. We have a low hanging fruit of 10 existing certified people. We have this community. We have these people. We want to be able to unlock this system. And you are the cheat. And this is what I expect because you are not...

Chidi: I think that makes sense. So the value proposition would be that we have to speak to those key people. If you're looking for people, we have an outfit or a community or an organization. So

Chidi: like there was a gig I went for.

Chidi: Mastercard was the client. WWE was the Prime. And they couldn't get anybody. So they went to another organization who brought me into the conversation. So you kind of have to be the sub-prime. So whatever the margin, then everybody takes their top off and then it finally gets down to the person. So you're not prime until you're big enough to be prime. Is that what you're thinking?

Rifat Erdem: Yes, but we will go to the customers IBM Cap Gemini. But we need to make sure that you, Marianne, we negotiate with the customer, meaning Cap Gemini or IBM in a way that we can also get the lion's share because we are not only bringing ourselves, we are bringing 10 people for them to be able to get these leads. And they are getting an unlock of their business development and we are solving their problem of them not being the business development.

Chidi: That can be done. That can be done. Getting 10 people is relatively easy. The biggest thing for me then would be that's fine. So we can get the 10 people, get 10 people certified. They know what they're doing. They're coming. Brilliant.

Chidi: The challenge now is going to be to get onto the payroll systems of these big organizations. The process is very

Chidi: tough. They want insurance. They want accounts. They want all those kind of indemnities and whatever, whatever. Once you get on the system though,

Chidi: you'll floor laughing for life.

Rifat Erdem: Yes.

Rifat Erdem: So you are...

Chidi: That's why Cap Gemini and all those guys, they're already on the system. They just open up another thing and it's easier for them. They've passed all the checks. Everybody's happy. That's why Deloitte will go in there and charge people \$400 because nobody can be asked to go through the payroll system, get them on what, Aggresso or whatever it is to get paid. If you don't want to do that hassle, then you sub to Deloitte. You sub to Cap Gemini. Yes. Which model are you thinking?

Rifat Erdem: I don't know. I am on the, right now, Cap Gemini. You are on the C Prime. Let's figure this out. Let's figure this out telling the Entropic wants to give us customers. We love Entropic. Entropic loves us. We are their certified trainers. People are around us. We are certified this many people. They want to give money. Cap Gemini, do you want to get this money?

Rifat Erdem: C Prime, do you want to get this money? Let's make this work because we don't have to be XYZ. We just said to get paid in this process. Sorry, Mariana. I did take you too much from the consumer side to the business side, but I said B to C to B. So this is B part, Mariana.

Rifat Erdem: Mariana also wants to do the to B part.

Rifat Erdem: But yes, this is how I see.

Chidi: Are you doing the certification, Mariana?

Mariana: I'm just joining this AI cohort because I want to learn more what they are doing and to help business with transformation. For example, I have a client from Brazil and they are

Mariana: providing chatbot solution.

Chidi: Okay.

Mariana: And there is a complex. But I mean that I'm interested on the business side, like more B to B, AI solution for businesses.

Chidi: How are you finding

Chidi: the market?

Mariana: Exactly. And I've started to work on subject from innovation to adoption because it's really a very complicated thing. Even people have a great innovative solutions. It's difficult to get a client and to explain the solution, to attract.

Chidi: Do you use a cold email or how are you getting your leads?

Mariana: Just through the understanding, you know, that I've created the value. I'm working, I'm developing the value recognition strategy.

Mariana: Exactly. Because emails, they don't work anymore. They people don't read emails. The messages people are overloading. But what can work, what is working, when you really... And not as well, you know, with my client, they published the updated website and they started from the pain, the biggest pain. And it doesn't attract attention when you are talking about my pain. Even I have that pain, it's not something that really attract attention. And there is a complexity. And talking to people, education based sales, but a little bit, not too much. It's again, it's nowadays, it's a mixture. And what I'm doing, I'm looking for the formula that can help because social media, emails, everything like that, it's about information overloading. We are

rejecting that. We can listen about simple things, but we don't want to listen about our pain. Then there is a personal.

Chidi: That's personal, yeah.

Chidi: When you go into

Chidi: everybody, like, "Oh, speak to their pain, speak to their pain, speak to their pain."

Chidi: Every time I get a new connection, I get pitch slapped. "Oh, Chidi, I see that you're doing this, this, this. We can help you. We can help you. We can do this. And then how do you solve this? We can help you. I'm hoping for a 30 minute chat."

Mariana: No, again it doesn't work.

Chidi: I just ignore them now. It's like they just pitch slapped me.

Chidi: And we

Chidi: have to get the clients. Let's get the clients. They keep talking about it.

Chidi: Do

Chidi: you remember during COVID, there were clients everywhere. It was a suppliers market.

We're like, "Yeah, okay you, just wait a second, yes. now we're looking with binoculars to find

Chidi: clients. And I don't know when it's going to flip or what is the actual place because there's a lot of rumors about money, lot of talk about money. I haven't seen it yet. Have you?

Mariana: People have lots of fears. Company have fears. Even they need to implement AI, but they still, the companies need to educate people, but they don't want people to be too much educated

Mariana: because then it's difficult to manage people. People should be educated on the level that is comfortable for the company, not more. And this is tricky moment. And if you can talk

Mariana: to companies and to develop the educational transformation strategy, especially for that company. But again, as you said,

Mariana: how did you get them to talk, to listen to you?

Mariana: How can you make them to listen to you? This is tricky. And it requires like personality and personal connections and communication and networking is needed. And as I realized in the UK, networking and personal communication is the key.

Mariana: The emails, they are funny.

Chidi: Maybe you are- So you do LinkedIn? Is that what you're using?

Mariana: The

Mariana: going to the networks, talking to people directly. If you want to promote, for example, if you want to promote and to get your audience, that's why communities are becoming so popular.

Mariana: Because communities give you the access to personality. And if you can get to, for example, the one of the biggest, as I know, if you want to get to biggest enterprises, you can go to British Chamber of Commerce

Mariana: and to different communities like, for example, for Erdem, where HRs are meeting, et cetera. But again, nowadays it's difficult to get to those communities.

Mariana: It's a must to be the part of AI community, for example, for Erdem, it's a must to know what is going around. And if you want to work with businesses, with big businesses, you have to be the part of their community as well, and then to talk to them, and then they will recognize you and to promote their things and to talk, to publish, et cetera. I think that the communities are

going to be spaces where you really can get clients. All other system might work, but the probability is lower.

Chidi: What kind of clients?

Chidi: B2C or B2B? You won't be able to get- B2B.

Mariana: B2B.

Chidi: For the community?

Chidi: So you're saying a CEO or an executive is going to join-

Mariana: Their employees and different people. I mean, to get to the level, to the communities where the decision makers are involved.

Mariana: Then they are through the talking about nothing, through the small talks, they are at least starting to recognize you.

Mariana: And they're starting to remember you. And then they are listening to you and you have to go and to meet them at least five times. Before there is a probability that they will listen to your idea. And when they are doing networking

Mariana: and relaxing, they don't want to connect their mind to the business problems. And they would definitely, they don't want to talk about business problem. That's why it's important to talk about opportunities. Not about business problem, but the opportunity capabilities and what you can improve. In general, the first moment is in general because in the UK, I have you, because I'm from Ukraine.

Mariana: We are different, but in the UK, they really liberate the personal connections. This is the first moment. That's why they are doing so much of networking. You cannot do, during the COVID time, probably you could do because there is a business needs, et cetera. And I know the guy of a Microsoft IT company, they honestly, they are just providing Microsoft services in the UK.

Mariana: But he said that he got lots more clients going to the network, like doing networking. He hired three more people to do networking because he cannot be

Mariana: at all like on the different events at the same time. It's exhaustive honestly to do networking.

Mariana: And he hired special, do you know why? Because then they started to recognize the company. I, are you working? What is the company about? Okay. And after- How long did it take you?

Mariana: I think that it took

Mariana: him probably, he has his own numbers, but after a year,

Mariana: when he started to do networking actively, he hired three more people.

Mariana: And they are doing networking like a routine. They have to be there.

Rifat Erdem: Maria, I agree on the networking side, what you are doing. So every Thursday in Triton Square, the Tony Blair Institute pays the money. I'm not saying come there because it has a cost and I'm passing through there. So Tony Blair Institute pays this money 200 to 300.

Rifat Erdem: Come into this venture cafe to Antropic. Antropic is paying all the pizzas, all the drinks. So people network there to be able to use the Antropic's money. But I do agree on the personal networking and that yesterday we had something very related to that. I was meeting with a friend of mine,

Rifat Erdem: who is the CEO for this enterprise with 300 shops in United Kingdom. So what he said was for the AI, he's got fed up with all the solutions that deliver no value to the sea level

people. So he got fed up. There's two places that he sees there is value. First of all, people are using it in marketing. I told you guys, I'm doing it in 10 times less time doing the videos. He's using the AI in the marketing.

Rifat Erdem: This guy is managing 300 shops in the UK like bulls. It's called Arabic anyway. So the second part that he said is the operations and he's using younger people on the operations and he's giving them the must-haves. The guy's name is Faruk. He said Faruk said, those must-haves, the young people are having a hard time using AI and to make that work. And those must-haves in operations needs to be like a clockwork, but he was having a very, very hard time. I agree with Mariana, what she said, the personal networking. He also said he was only hiring people based on personal connections. A recommendation.

Rifat Erdem: Not because of LinkedIn though. So if we come back to our situation with Chidi, if we have this community here, if we have 10 people here, we have the personal connections with Antropic. We have the personal connections with the community. We could become like the commissioners, like a real estate salesperson, that is the buyer and the seller and be able to create a deal out of it. So we are going to-- All right, let's switch it up a bit.

Chidi: Let me ask a different set of questions or let's plan something different now. So let's say we've got 10 people, we've got the certification.

Chidi: Anybody who's gonna get anybody in to solve a problem, we have different roles. What are the key roles we identified? We

Chidi: have identified that we say, hey,

Chidi: I'm Adam and I've got 10 guys. Oh, I need a guy that does this or this. What are the key verticals that anybody who's coming in?

Mariana: Can I tell you my experience? Because I was doing some things that Adam wants to do right now and I was educating people, I gave them profession

Mariana: and I as well, I had a recording person who was helping to connect companies who were looking for people and these people

Mariana: and people knowing--

Chidi: Yeah, that's slightly different from what I'm asking. So you were working as a recruiter. I'm saying the individuals who get the certification, is it just one blank certification and they can go in anyway or is it a certification as a foundation for a specialized role they go into the organization to execute? That's what I'm asking.

Rifat Erdem: She did Claude Entropic created four roles, which I think line up with the audience. The first one is the associate, the second one is the Claude certified developer, the third one is the architect foundations, the fourth one is the architect professional, which goes in to the companies, the Palantir called it Forward Deployed Engineers, goes

Chidi: into the companies-- So you're an architect or-- So you're an architect or developer?

Rifat Erdem: Architect, developer, associate. There's also associate as well because for a big organizations, you always need to associate the BA people as well.

Chidi: Yeah, so if you're an associate, if you're a developer, you can be a developer or junior developer if you're an architect or junior architect. So there's two tracks.

Chidi: So there's-- So there's-- Okay.

Rifat Erdem: They created four tracks though, but they called it associate, developer, architect, two different types. One of them is more abstract, more of them is more hands-on.

Rifat Erdem: So this is what we got from them right now though. So they separated those certifications.

Rifat Erdem: I have looked at people who are passing on CAP Gemini. Most of the people are passing the associate one.

Rifat Erdem: People started to fail. The one that I got, I thought everybody was gonna go for that. People are not going for the architect professional ones. People first realize that they need to go to developer, then realize vibe coding and getting the developer certificate are not the same things. Those a little bit started to crack fire in the community. What I see because in the beginning, just learning prompt engineering is enough to be able to bypass the associate certification. But the developer certification, you need to be able to have an MCP server, things that are working for you, for you to be able to become like an architect, like the videos that I created. It was taking me seven days to complete. I'm right now completing it in 70 minutes. So an architect builds all these tools and the bits and pieces in the background, makes the AI become useful, even though it is like an octopus. At the end, it can create an output. The architect does that part, but soon the main problem is IT had this positronic change, meaning a level change. What is happening is right now, people are required to spend money. In the past, in IT, nobody asked any Habibi to spend any money. Right now, AstraZeneca is spending two million pounds a month to spend this. No CEO can say, "I gave this money to Chidi. He's un-certified. He lost my money."

Rifat Erdem: The C-level cannot give this job to not certified people that can come in and deliver. They need to have a cover.

Chidi: Hold a

Chidi: second. When you say spending, you know what they're spending the money on, don't you?

Rifat Erdem: Data science, and they are building their generated models for the DNA research.

Chidi: A lot of that money is going on the token usage. So what has happened is that they just go, "Oh, we're part of Anthropic. Give everybody access to cloud." And then they build things they don't need, and they're burning off tokens, burning off tokens. So what happens is that the bill comes back, and then they're like, "Ooh, each..."

Chidi: The recent research that I did, each person is spending about 2,000 pounds a month in tokens, and they're not really... They're having difficulty getting the ROI."

Chidi: In addition to the stack, so there's different people, people who are building data centers, people who want to get more computes. Then you have the other people who are like, "Yes, we'll floor cloud now. We're cloud now. Okay, so what are we building? You have an account. You have an account like Oprah. You get an account. You get an account. Oh, let me try to build this. Let me try to build that. They're burning

Chidi: with Fable, burning tokens, burning tokens." At the end, the company has to pay the bill. So it's not quite working out how they thought.

Rifat Erdem: She did. They are not going to go to the customer side. This is B2B in terms of your customer is AstraZeneca, or your

Rifat Erdem: other side is a real estate deal buyer seller. You can tell them to take them to Gemini or to Entropic. We need to get paid from Entropic. We need to get paid from AstraZeneca by using the Cap Gemini because we can always move that workload.

Chidi: How do we get paid from Entropic again?

Rifat Erdem: The Entropic is the place that is providing this infrastructure. And the Google, they are also in the Triton Square.

Chidi: No, no, no. How did they pay you? How do you actually get money from Entropic?

Rifat Erdem: We need to find, I don't know how. We need to find the way how to get paid from them by going to them and asking how they can pay us because they have a problem of finding these certified people right now. Everybody's paying people to get certified. So we need to be able to find the way from Google.

Chidi: You've confused me. You've confused me, Rifa.

Rifat Erdem: Yes, we need to find the way to be, because what you can do is... It's just refers.

Rifat Erdem: Chidi can recommend either Entropic or Google or Microsoft.

Rifat Erdem: That is in Chidi's hand. If Chidi has these certified people, are they gonna get certified for Google, for Gemini, for X?

Chidi: That's fine, that's fine. But how do we actually make money from all these efforts?

Rifat Erdem: I'm not saying I know that. I'm saying there's a problem there with the partners. There's a problem with Entropic. There's a problem with the certification, but I don't want 100% the roadmap to go there though. But I'm putting myself next to Entropic and Google, talking to them and trying to understand where they are.

Chidi: So Rifa, hang on a second. Hang on a second. So that's fine. We don't know.

Chidi: If we wanna get money from anybody, no matter what, we have to have an offer, a compelling offer that people will accept, take and give us money for. Entropic, B2B, B2C, I'm saying, based on all these problems we've identified and all the pains that we've noticed, what is the offer that you're gonna go to? A, Entropic, I have this, give me money. What is the offer?

Rifat Erdem: The offer is the people that we bypass these certifications are not just getting a certification, but getting a transformation, not just a six word, the term that the Palantir outlined, the Forward Deployed Engineer. I call them the-- Yeah, I understand that.

Chidi: But why would

Chidi: Entropic care? You're gonna use their surface. Hang on, you're gonna use their surface anyway. You're gonna go into an organization and help them do better. Why would Entropic pay me? Wouldn't it be the company that will pay me?

Rifat Erdem: Yes, you asked a very good question. I have a Porsche Cayenne.

Rifat Erdem: Would you like somebody who is not certified to drive this car in a race? We are the guys, Chidi is the guy who is certified to drive and Chidi is the network to be able to certify--

Chidi: You shouldn't have brought up racing.

Chidi: I am Porsche, I am the manufacturer. So I will supply you the car, I will supply you the parts. You are the race team, so you have to fund the race team, you have to buy the parts from me and you have to win.

Chidi: Whichever driver you put. Anyway, that's--

Rifat Erdem: Yes, but you gave a good example though. I don't know how we get the money from the Ferrari, from the Porsche, but we need to be able to find, because we have these pilots. These are called delivery pilots. These guys are killers. These guys are gonna go in and deliver the correct value. And the CEO doesn't come up, our AI project failed.

Chidi: These guys are gonna-- I think that's the big question. We have to find out the way to get the money from whoever, wherever, because nobody's doing this for fun. We wanna make money. We want to be on the yachts in summer and have a good time after many hard work. So

where is the money? They're spending the money, but how do we get a sniff of it? This all seems to be very high in the sky.

Rifat Erdem: I called it the delivery pilot. Once I worked in Accenture, they are high promise bus, high platform speeder. You've told me about this. We've talked many, many, many, many times. How do we go to get the money?

Rifat Erdem: We need to show that we have the certified people who can deliver their AI solution. Not somebody that does the vibe coding, but somebody who is going to get them, because the CEO is going to spend the money on AI. He has lots of pressure on spending the money on AI.

Chidi: Conflicting two things here again, Rifat.

Chidi: Anthropic is one,

Chidi: the business is another. Which one are we focusing on? Are we getting the money from Anthropic or are we getting from businesses?

Rifat Erdem: I don't know. I know we need to be in the middle. The reason that I know is we got to stay in the middle and play the both sides. If we can't get the money.

Chidi: I agree. No, I agree, Rifat. And this is what we're workshopping now. So we have these two entities and we know they're rich. And where the two farm boys standing at the fence, looking in and thinking, how are we going to make our fortune?

Rifat Erdem: So you need to play the hand to both of them, I think. If you're a real estate salesperson.

Chidi: You've gone again, you've gone again, Rifat. Stop. How? What do they need?

Chidi: Do we need to go and wash dishes? Do we need to wash the cars? Do we need to work our way up from doorman to security before we get into the big money?

Chidi: Let's talk actuals. Oh yes, you can do this. Yes, you can do that. Yeah, yeah, yeah. So can a hundred other people also looking at the gate, looking in.

Chidi: Yes. What's our differentiator? How do we get the money?

Rifat Erdem: Certified people of a network.

Chidi: Everybody's certified. Forget certified. We're certified. 10 of us, how do we get the money?

Rifat Erdem: Other than the certification and a community, I have no answer to you though. Right now, my main thing is, as community, as certified people, that plays the both sides to be able to do--

Chidi: I'm going to jump in again. We always come to this point, Rifat. So that's fine.

Chidi: But one of the things that we need to do in parallel is, okay, we're doing all this work.

Chidi: And you're telling people the promised land is over the hill and far away, but somebody needs to be able to say, yes, the treasure is actually there. How do we get to that treasure? Okay, you got 10 guys now, they're certified. Let's move forward six months. 10 certified guys.

Chidi: You said we'll make money. You said we'll get jobs. You said, "How?" And you're like, "Well, I haven't quite figured it out yet." We kind of need to figure that out now.

Rifat Erdem: My

Rifat Erdem: solution to that problem right now is make the community bigger, make the name bigger.

Chidi: And start charging and then make money from the students.

Rifat Erdem: Making money from the students is not the key though. That is the main thing.

Chidi: Good, good. I was just checking. I was just checking.

Rifat Erdem: Yes. To create the community, once we have the name, people don't know that we are gonna go to AstraZeneca and we will play the game of the CAPTCHA. IBM, the game in the background. So if my thought process is, if the B2C funnel is big enough and we go around a big name for us, the CAPTCHA might not have a problem to be able to say, okay, these guys are known, such as there's this company called ThoughtWorks, the Martin Follers company. They use that ThoughtWorks company, the name and the brand, and they went in as an IBM and so on.

Chidi: Hold on a second, Rifat. Sorry, sorry, sorry, Mariana. This is what we always do. Hold on a second. Back in the day, before AI came along, whenever we wanna do a big project, we used to do this thing called a feasibility study. And then we get this booklet of the feasibility study of this business. And then let's say we want investors to come in and put a hundred thousand pounds into this business. What I'm asking is what they're going to ask you. If we go on Dragon's Den and say, "Hey, Dragon's Den, hey, we have 10 certified people and we want you to invest 10 million pounds in our business." They're like, "Okay, so how do you get your clients? How many clients did you get last year? What's the size of the market? How do you go? Oh, we have, those are the questions we're not answering yet. So we have to be careful not to put too much time, effort, and energy into something that we don't even know the mechanism to get to the other end.

Chidi: If you go and play tennis, you know that you have to pass round one, pass round two, beat Rafa Nadal, or you beat the Federer, and you become the champion and you get, and they say they give you prize money. We know the path to greatness. This,

Chidi: yes.

Rifat Erdem: I thought you were going to ask this question. So we created an agent with 200 documents in it. Having the term total addressable market, pains, gains, customer values, channels, everything in it. And two months ago, it was getting 35 out of hundreds of business feasibility. It does a business feasibility study every time I talk on it. Then what we did two months ago with Mariana is we created this school community and the score of the feasibility is not still 100. It moved from 35 to 50. Right now, the more ideas that I add, it came from 50 to 48. It is doing this, all these models, and does the feasibility study. Do you know what it says about the traction of this business, which we had Maggie in one article, she had this tech talk about the traction AI and the governance. She said the idea is not a problem right now. The problem that we have is the more ideas we put into this business will not move the needle. It says we need to do more execution and that execution has to come from the marketing side. Meaning people joining in, people getting into this. We create, as Mariana said, a bigger network, being able to create the connections,

Rifat Erdem: have people piling up, but you are right though. We still need to figure out how to turn this B2C into B2B.

Chidi: Yes. So pause a second. You, me and Mariana know.

Chidi: Her friend is,

Chidi: maybe he's

Chidi: a gentleman and he has a gift of the gab and he's good at networking and he's got all these people. The challenge with that is it's difficult to replicate.

Chidi: So just because he does it and you try and do it, there's no guarantees.

Mariana: Now we can, you're absolutely right. We cannot nowadays duplicate someone's solution. No.

Chidi: Yeah.

Mariana: Because we have different product, different case, different people, everything is difficult. We cannot say that Erdem can do the same. He can liberate that, but it doesn't mean he should repeat that.

Chidi: I strongly believe that the technical solutions and the execution and the transformation and the tech is the easiest bit because we can get scientists and really brilliant 22 year old or whatever. Getting them is the easy bit. The hard bit is

Chidi: Erdem, come.

Chidi: I want you to do this project for me or I want you to do that for me. And then, and then Antropic sees it and like, oh, we like you, we like you. Don't be a bronze partner, be a gold partner. Don't be a this, all of which you have to pay for remember. You have to pay more money and then you have to get a bigger stable and you're funneling the thing is, but the end client is the CEO, the CTO, the CIO who says, I want this company. The challenge that I'm seeing now is I was, you remember I just finished stuff from Nokia. I did stuff from Nokia. I remember we were talking about B-MAD. So we're in there doing agility, getting the whole team. I trained all the people and they're like, yeah, well, you know, we wanna, we wanna do, they wanted to do a little bit of, of the B-MAD thing. Before we could do anything, there was a change of leadership. You brought this new guy in

Chidi: and then conversations, conversations, they just nodded their head, the lights was in.

Chidi: So the light is gonna go in now, shuffle some papers. The light has got the money now.

Chidi: How do, so you're just frozen out of that market. And then when they're finished, how do you get back in? That is the big challenge. How to get in the foot in the door where you've got a senior enough person who's bought into corporate. Nokia now is not even finished anymore.

Nokia has been bought over by the people in the States. So whoever is high up in the States, whichever relationships they've built with whoever the CEO sent Deloitte in, was on the NDA, don't say anything, don't say, which company? I said, Capgemini, I said, no. I said,

Chidi: what's the big four? BCG said, no. I said, is it America? He said, yes. I said, Deloitte. He said, hmm.

(Laughing)

Chidi: And then he was Deloitte. Deloitte had come in and, phew, C Prime was in there.

Chidi: So how do we get them to give us their money?

Rifat Erdem: I will go to Deloitte this Monday or Tuesday. I asked Mariana to come in Cambridge in the States.

Chidi: Do I need to bring my, either I can bring my Ruger, my AK-47, which one do you want me to bring? So we can, you're gonna sign, sign.

(Laughing)

Rifat Erdem: So I'm gonna ask to them as well though. They have this place called the Startup Incubator, kind of start Deloitte's doing, and they are trying to get involved with the AI people in.

Rifat Erdem: I got the partner's connection.

Rifat Erdem: Our kids are playing together in the park. He said, come in and pitch what you are doing. I will ask them though. I don't know, but this Monday or Tuesday-- Can I go in?

Rifat Erdem: This Monday or Tuesday, because we tried to do this four times, they are next to the Clayton Hotel, Mariana, next to the station road. I know, I know. The guy's name is called Samit, so we should go and see the guy and get the bottom of this. But let's position ourselves, and what we do, Chidi is, Chidi raised all the concerns. I raised them. We've got concerns, it's just questions. AI agent does is Chidi. It is not me doing the work. The AI agent can take our score from right now, 48 to 46.

Chidi: With all due respect-- Or he can take it higher. AI can give you a score of 100 over 100, and it looks good on your monitor, but it doesn't translate into money that pays the bills.

Rifat Erdem: Yes, but hold on. This AI agent is different. This AI agent, if I add in more complex, they make it like this, it is decreasing the score.

Mariana: The problem is, Adam, that you are making like this,

Mariana: and people are getting, you know, and exactly-- Thank you, Jesus. Thank you.

Somebody has said what I have always been saying. The shortest distance between two points is a straight line. Not them, them go,

Mariana: hmm, hmm. Oh, oh, oh, yeah, yeah. Exactly.

Chidi: We're over engineering this. Yeah.

Mariana: Stop making like this, make it simple, recognize the value you're providing. The problem is that you are making it, and I cannot do like this, but you are, you know, because you can, you know, the tricky moment is, you just can, and you enjoy the complexity, but we cannot run after you.

Chidi: Mariana, you're my second best friend now, after Adam.

(Laughing)

Mariana: Thank you. Because I, we, Chidi, before you joined us, I was talking about the main obstacle. I was saying, Adam, the one thing you have to follow just to be simple as possible.

Mariana: But before Adam,

Mariana: for other people, it's just to learn and to investigate and et cetera. For you, Adam, the biggest challenge is to be as simple as possible. And if you can achieve that challenge, you are successful.

Chidi: We have to find the customer. We have to find this problem that they need to solve. That you were talking about Alex or Mozi, 100

Chidi: million dollar offers.

Chidi: How quickly can they get it done? What problem? Remember the equation, one, two, three, four, those four things, we're trying to simplify it. If you look on

Chidi: LinkedIn, oh yeah, yeah, yeah, build this, has it for free. Oh yeah, yeah, build this, has this for free. Click connect.

Chidi: They'll say, connect to me and DM me, I want it. And then they'll send it to you. So everybody is pumping, everybody's exhausted. When I see that thing, I just get bored. In the beginning, I was like, oh, I want this new, this new sub, this new,

Chidi: what's that called? Git, I want this new Git. Oh, I want this new file. Oh, this agent, take this agent, take this agent. Now my laptop is slow. I have to delete the whole thing.

(Laughing)

Chidi: It doesn't do anything. And then the worst part in one month is obsolete.

Mariana: I should write an article again, guys, because during my IT careers that I've been doing for 20 years, during my education business in IT that I was doing for 13 years, I still see

the same picture, the technical people, they have so much of fun enjoying their knowledge and their ability to do complicated things that they don't remember about the reality and about the simple things. And we people who don't enjoy coding and building complexities, we have difficulties to manage them and to get the result. And the main fear of businesses is just to get a real result from-- You've

Chidi: got an engineer, you get an engineer who build a robot. You cannot manage him. What does the robot do? Oh, the robot,

Chidi: there's the remote control. The robot will go and bring the remote control. How many tokens you spent? Oh, 50 million tokens. I suppose you can just get up and get the token. Yeah, well, I just did it because I can. Look, look, look, look, it brought it. And then you're burning the tokens. What's the actual thing you're supposed to do? Oh, we're supposed to be checking this. You build nothing, it looks good. It's like, oh, I did it. And I also use VO2 and I use this thing and it's hyper realistic. And look at the guy, look at the pixels. Oh my gosh, it's fantastic. Look at that. Remember last month we couldn't do it. And I'm like, oh my God. Okay, how are we making money here?

Mariana: It's not about making money. It's about joining the technologies.

Mariana: But it's different.

Chidi: For Utharum, he's in San Tropez. He's got his drink and his little hats and he's on the floaty in the pool. I

Chidi: built something else today.

Chidi: I built something else today. Look at that.

Chidi: Chidi, this is how he called me Chidi. I built something, it's fantastic.

(Speaking In Foreign Language) (Laughing)

Mariana: Adam's got red.

(Laughing)

Mariana: It's really, it's a great fun, but I think this is the main difficulties. Just, there is a phrase, if

Mariana: I'm correct, to manage cats.

Chidi: It's herding cats.

Mariana: Herding, herding cats. Herding cats.

Chidi: Herding cats.

Mariana: Yeah.

Chidi: Yeah.

Mariana: Yeah, like the same in business with

Mariana: tech AI guys. It's the same.

Chidi: All right, so I've gotta go now, but here's the thing. So, Adam, I know we've had fun with you. What you do is really, really important, but what we need to do is, we're trying to stabilize you for a little bit because your

Chidi: volatility and the half-life of your nuclear polymer.

(Laughing)

Chidi: Sorry.

Chidi: We have to find out where the money is and how we get it, just a straight line. So, when next you go, who has the money? Where is the spend? How do the partners get it? These are the questions you need to ask. Okay, so I'm a partner. How do I get the money? Find out.

Chidi: There's an answer and we don't have it.

Chidi: Because once we have it, in anything we do, we have to follow the money, bro. Otherwise, we're just having fun. We're the famous five, having adventures and solving mysteries like Scooby-Doo and the gang.

(Laughing)

Rifat Erdem: Yes, Chidi, I do agree. I will make-- You always agree, you always agree what's happening.

Chidi: You're always agreeing, Habibi. Like, try to be-- No, no, I'm not-- Try to be--

(Laughing)

Rifat Erdem: Yes, yes, you're right, you're right.

Chidi: Sorry, sorry, I missed that. Yes, you did say no M dashes. Yes, yes, sorry, my bad, my bad, my bad, my bad, my bad. I'm not hallucinating, Habibi. I'm not hallucinating. I can see you.

Rifat Erdem: Yes, and Chidi, you are right though. I'm not all-- It doesn't have to be me to agree. I build this agent based on hormones and that agent asks the same questions as well.

Chidi: But I'm-- Everybody, I'm sure if we did a poll, how many people have built agents based on hormones? You would get 52 million people who have all asked about hormones. It doesn't matter. The homo-zipid can be done any point in time, T. We have to find the-- We have to get to the well and find the buckets to go down into the well so we can drink water. If we're not drinking water, we are wasting our time.

Rifat Erdem: Yes, I will get-- And the energy and tokens.

Rifat Erdem: I will get you the answers that I can get right now and put it into one page, especially for this-- Stop, stop, stop, stop, stop, you're doing it again. It's a collaborative thing. We're not sending you away to go find the answers. We just have to meet again and plan. Okay, what information do we need? Who do we need to speak to? What is the process? How do we get this done? It's not-- We're not telling you off and saying what you're doing is wrong. We say we have to keep up. The main purpose of going into business is not to get customers, it's to make money. If we're not doing that, then we're having a hobby. Then we're having a social gathering. Then we're having a meetup. We're having an adventure. If indeed we're doing business, at the end of it, you said, ah, my ROI is this, my investment is this, my profit is this, I now have freedom. If we're not doing that, let's say we're not doing that. Anything else,

Chidi: we're having fun. And I'm all for having fun.

Rifat Erdem: I don't agree. I just don't want to have fun, but I wanna have fun and I wanna have money at the same time. You wanna make money? Yeah, I wanna make money while having fun.

Chidi: All right then. I gotta go, but next weekend, let the topic please, kind of topic of how we make money. Let's start from how we make money because the products and the means is fine. If I have a brand new Toyota Corolla outside, it is the vehicle, that's AI. But unless I go and get my

Chidi: Uber license and go out and get customers, no money will come in. How do I get it? I have to get the badge, I have to get the thing, I have to get the sticker, then I have to get the app, I have to get my login, I have to give them a bank details and I have to be ready, go to the hotspots, customer, money, customer, money. We haven't plotted that out as far as AI is concerned yet. Once we do that, then we can say, ah, this works, double down, this works, double down. This doesn't work.

Chidi: Right now we're just

Chidi: on spring break.

Chidi: On that note, I gotta go guys. All right. Have another call. It has been my pleasure meeting you Mariana.

Mariana: I'm a little bit, yeah, it's nice to meet you.

Chidi: I have enjoyed this conversation.

Chidi: I'll probably see you guys.

Rifat Erdem: All right, see you.

Chidi: Bye. See you everyone.

Mariana: Bye-bye.
